

THE FUTURE OF  
*Flight*

See projects

### TRAILING EDGE

#### TARGET

- Performance Optimization
- Simplicity of Intergration
- High Lift

#### DESIGN ADVANTAGES

- Augmented Design Space
- Exploration for Optimized Design

### SHARKLET DESIGN

#### TARGET

- To Reduce Drag

#### ADVANTAGES

- Complex Multi Disciplinary Process
- Accelerated Design Cycles

### AIRCRAFT

#### OVERALL

- Seamless Design and Manufacturing Loops

#### NEW DESIGN CHOICES

- Extended Trade-offs for Designs
- Better and Leaner Manufacturing and Assembly Process

#### WING INSTALLATION

TIME: 180 MINUTES  
WORKERS: 5  
PARTS RECEIVED: 1  
NOTES: NONE

#### HORIZONTAL STABILIZER INSTALLATION

TIME: 180 MINUTES  
WORKERS: 5  
PARTS RECEIVED: 1  
NOTES: NONE

#### ENGINE INSTALATION

TIME: 200 MINUTES  
WORKERS: 8  
PARTS RECEIVED: 1  
NOTES: NONE

# ADAM

Transforming aerospace design and manufacturing through digital innovation.

ADVANCED DIGITAL DESIGN  
AND MANUFACTURING

# Wayfinder

Creating autonomous flight and machine learning solutions to enable self-piloted aircraft operation.

Project Wayfinder is building scalable, certifiable autonomy systems to power self-piloted aircraft applications throughout Airbus, from small urban air vehicles (aka air taxis) to large commercial airplanes. Our team of experts is driving the maturation of machine learning and other core technologies for autonomous flight; we are creating a reference architecture that includes hardware, software, and a data-driven development process to allow aircraft to perceive and react to their environment. Autonomous flight is transforming the transportation industry - our team is at the heart of this revolution.

WAYFINDER
