Single Cylinder Generators

Welder generator

- Digital control panel automatically controls the running.
- AC auxiliary current and DC welding current can be used simultaneously, which improves the working efficiency and is convenient for operation.
- The smooth arc is available for any welding.
- Oil alert automatically shuts unit down when the oil drops below a safe operating level to prevent engine damage.
- Fueled by diesel with low consumption.
- 4-wheel transport kit for easy maneuvering.

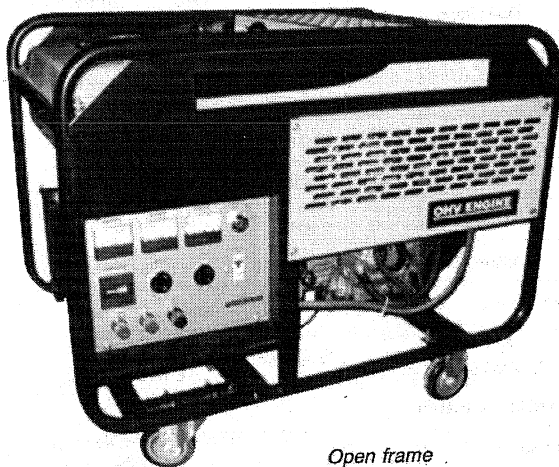

CE

P/N	Description	Engine	Noise (dB/23Ft)	Starting system	Rated Speed
QEG029	1-Phase, Diesel, electric start, 7KVA	Single cylinder, 4-stroke, air-cooled, direct injection, diesel engine	75-79	Recoil	3600

Multi-Cylinder Generators

- Dual voltage. 120V or 240V enhanced versatility.
- Low oil pressure alert system.
- Easy start. Automatic decompression, and electronic ignition system provides reliable starting.
- Safe operation. Air breaker for AC circuit protect the generator set from overloading.
- Digital display & controller. Indicates operating data such as voltage, frequency, and current.
- Long running time. Efficient fuel consumption and large capacity fuel tank provide hours of interrupted operation.
- Economy idle. When there is no load on the generator, it can be set to automatically return to idle, which improves fuel efficiency and reduces running noise.
- Auto Voltage Regulator (AVR). Ensures the smooth output.
