

1 serving of spirulina is equivalent to the nutrients of more than 5 servings of fruits & vegetables

GEM's mostly made of algae, like Spirulina and Chlorella. Better for *all* women, including Mother Earth.

Grows in fresh & salt water - even space! Algae is NASA's choice for long-term space missions & our choice for your daily nutrition

OUR SECRET IS ALGAE.

GEM is part of our broader mission to democratize access to healthy and sustainable plants and change the way we nourish ourselves.

Our first plant love is algae – like Spirulina, Chlorella, and Astaxanthin. Carbon neutral and nutritionally-dense, algae does wonders for your body and our earth. Even NASA and the UN think so.
