

OraNet™

OraNet™ is our international network of more than 400 investigative sites across the US, Europe, and Asia – each one carefully selected for its strict adherence to quality standards for ophthalmic clinical trial conduct.

Our Global Ophthalmology Site Database

Working with high-quality sites results in a clinical trial that is more likely to finish on time, on budget, with minimal data variability. Every OraNet™ site is composed of ophthalmologists and their staff who are experienced across all ophthalmology specialties including dry eye disease, allergic conjunctivitis, glaucoma, cataract, and diseases of the retina.

All OraNet™ sites are required to meet the following stringent qualifications:

- Must undergo Ora's highly selective evaluation process that grades ophthalmology experience, skill sets, integrity, and organizational abilities.
- Must have an unparalleled dedication to careful adherence to current Good Clinical Practice (cGCP) guidelines and requirements outlined by our Quality Compliance team.
- Must have experienced clinical staff with a passion for excellence in ophthalmology clinical research and the diligence necessary to successfully execute a clinical trial protocol from start to finish.

Once selected, OraNet™ sites are extensively trained and supported by our in-house clinical trial specialists who work closely with each site to instruct investigators and staff before the start of each new protocol – as well as during the study to manage efficient trial execution and ensure protocol adherence. Access to Ora's validated clinical models and scales standardizes study environments at OraNet™ sites, reduces variability among sites, and delivers more reliable clinical trial outcomes.
