

Informatics and Information Technology

Karna brings effective technologies and experienced staff to solve information problems.

Our software engineering and data management projects deliver products and services that integrate with and service the programs and stakeholders they are intended for. We integrate our domain knowledge, software development / maintenance / enhancement expertise, project management, and a solid understanding of health program performance to deliver value to the client's mission.

Systems Modernization / Development / Maintenance / Enhancement

Software Releases and Deployment

Karna has successfully obtained Authorization to Operate (ATO) for all of our developed and maintained systems. We work in collaboration with our clients' governance and security organizations, to assure compliance and rapid authorization. We are prepared for the vulnerability scans, 508 compliance approvals, security reviews, and implementation plans and procedures that are required to pass an Operational Readiness Stage Gate and ensure a smooth migration onto production platforms. Our customers can depend on our end-user technical support through go-live and during operations.

Operations and Maintenance

Health Communications and Training

- Social Media Advertising and Marketing
- Materials Development
- Website Design and Graphics**
Karma has experience in delivering not only content, but also Section 508 compliance, organizational conformance, and Plain Language. We've developed updated content for a diverse array of programs including MMWR, the Center for Global Health, Global Migration and Quarantine, and the Vaccine Adverse Event Reporting System.
- Training Program Creation and Delivery
- Expert Panel and Advisory Boards
