Abnormal Security analyzes email to detect and stop:

- Spear Phishing
- Business Email Compromise (BEC)
- Email Account Compromise (EAC)
- Plus dozens of other targeted attacks, including those never seen before

— The Problem

Despite multiple layers of investment into the email security infrastructure, targeted attacks continue to plague organizations. These traditional approaches look for known threat signals: bad sender reputation, the presence of malware or a malicious URL, or whether the elements of the email have been seen in the past.

Comprehensive Visibility of Email

Unlike a traditional email gateway that only

Real-Time and Retroactive Protection

Abnormal Security protects against

No Impact to Existing Email Infrastructure

Fully interoperable with your existing Office

Fast: One-Click Integration

Integrates to Office 365 / G Suite via API. Takes just 5 minutes for an IT admin.

What do enterprise security leaders say about Abnormal?

"I've only seen this approach for UBA and

"I view Abnormal as a knowledge base that

"Abnormal Security's ability to turn around

"I've only seen this approach for UBA and insider threat — not email. This is the approach you need to solve business email fraud - our #1 concern right now."

CISO, F500 Chemical Company

"I view Abnormal as a knowledge base that measures how often you email others, builds a relationship graph between people, and builds credibility around my emailing behavior for high risk employees and departments - makes complete sense."

CISO, Public Technology Company

"Abnormal Security's ability to turn around & modify the service to end users' needs is by far better than any other vendor I have [out of 1,000 technology vendors]."

CISO, Large Oil & Gas Company
