

## Overview - Company Expertise

---

This TEK team has worked together for over 30 years in company management positions, board membership, and in both business and technical consulting roles. Prior to founding TEK-Energy Systems, the team ran SatCon Technology Corporation, SatCon, (NASDAQ:SATC). SatCon provided products and services to major international companies, including the following: Chrysler, General Motors, Ford, Litton, Fuel Cell Energy, Applied Materials, U.S. armed forces, the Department of Energy and NASA. Products developed by SatCon have contributed to the advancement of the renewable energy, hybrid vehicle, ship building, industrial automation, semiconductor processing, and defense markets. SatCon is particularly well known for its work in flywheel development; advanced electric drives; in the technology of inverters for smart grid and photovoltaic applications; and in the development of light-weight, high-power electronics, which contributed to the development of practical hybrid and electric vehicles.
