Announcing webMethods.io

By Ann Marie Bond 4/22/19 | 0 Comments

The next generation of Software AG's iPaaS

In April Software AG unveiled webMethods.io, the next generation of Software AG's integration Platform as a Service (iPaaS), which combines low-code usability with high control of complex integrations and APIs. With an industry-leading set of 300+ supported connectors, this multi-function iPaaS integrates apps, data, APIs, B2B and IoT devices.

Available on multiple cloud infrastructure platforms, webMethods.io eliminates the need for you to perform upgrades, maintenance or fixes as you gain the cloud benefits of cost efficiency, speed, security and flexibility.

webMethods.io integration

webMethods.io Integration is the new name for webMethods Integration Cloud. The April release incorporates an easy-to-use, graphical UI that makes it easy to develop integration workflows, while retaining the advanced orchestration capabilities for complex integrations and APIs. With out-of-the-box recipes and a single set of 300+ connectors to SaaS, on-premises and IoT apps, building services and solutions is faster than ever. New connectors include Salesforce® Streaming & Replay Events, updated Oracle® support for apps adapter, and a JDBC® adapter on the Integration Cloud with certifications for cloud databases such as Amazon® RDS for Oracle and SQL Server as well as Amazon Aurora for MySQL. Cloud deployment continues to be a primary focus for webMethods with new support for webMethods CloudStreams connectors for SaaS applications. Also in the April release is the ability to roll back deployments and command-line support for DevOps automation. Finally, an embedded integration capability even includes conversation agents (chatbots) for apps like Salesforce and Trello®.
