unscheduled (perhaps in a hallway or physician lounge), were immensely helpful: we shared our clinical perspectives and expertise in an environment marked by collegiality.

The introduction of EHRs into the hospital workplace has had many lasting effects, including on physician-to-physician communication. While workflow and administrative impacts have been widely reported, clinical communication has not been as thoroughly explored.

Based on a roundtable discussion I hosted recently with other physicians, technology is regarded as a double-edged sword when it comes to communication...

PatientKeeper Optimizes EHRs for Physicians

eBook: Attending to Physicians: Why Healthcare Must Focus on Improving Physician Experience
Our Mission:

Advancing healthcare with instinctive, empowering technology that respects the importance of physicians.

This is in our DNA. It's at the core of why PatientKeeper was started 20 years ago.

We are in this business to advance healthcare. So are others. But we choose to focus on the most critical individual in the healthcare system: the physician. In recent years, with the advent of the EHR, the healthcare industry has overloaded physicians with seemingly endless amounts of data, pinged them constantly with alerts, and asked them to learn cumbersome systems and perform administrative tasks. There is no other profession where the workers with the highest level of knowledge are asked to perform lesser tasks.

Every EHR provider makes the same claim: increase quality of care while reducing overall costs. Easy to say, but it has proved hard to achieve. And every day we see reports of physician dissatisfaction, frustration and burnout.

With PatientKeeper, it doesn't need to be that way -- because we don't make your EHR, we make it better.

📄   eBook: Attending to Physicians: Why Healthcare Must Focus on Improving Physician Experience

🎬   PatientKeeper Optimizes EHRs for Physicians

Advancing Physician Satisfaction

Physicians are a crucial resource in any healthcare system. Helping them to be as efficient and productive as possible is a top priority for every hospital and practice group. Unfortunately, there are many things about today's EHRs that work against this goal, from time-consuming training to unnatural workflows to alert fatigue. PatientKeeper's approach to health IT puts physicians first to ensure they maximize the amount of time spent caring for patients, which also contributes to their overall professional satisfaction and affinity for the organization with which they are affiliated.

LEARN MORE

Advancing Clinical Care

PatientKeeper provides physician workflow applications that deliver a next-generation physician experience, and contribute to better and

safer patient care. For example, PatientKeeper's new adaptable user interface has the ability to tailor clinical data presentation based on a provider's specialty, personal preferences and the patient's situation. Highlighting the most important information saves time and reduces the chance a provider will miss an important result. This ensures timely, effective care and ultimately will improve outcomes and reduce cost.

LEARN MORE

Advancing Organizational Effectiveness

PatientKeeper helps hospital executives address numerous strategic challenges. For instance, not long ago consulting physicians had to spend the night in the hospital just in case their expertise was needed. Then came pagers, and consultants were able to come to the hospital only as and when needed. Now PatientKeeper allows providers to completely review up-to-the-second information about a patient and properly triage that patient directly from the provider's mobile device, enabling more efficient management of a hospital's consultant resources.

PatientKeeper Physician Portal Gives Providers a Unified Information Environment

Physicians no longer need to learn and navigate multiple hospital systems. PatientKeeper gives providers a single software environment to work with a comprehensive set of clinical data from multiple hospital applications, accessible from any web browser.

WATCH VIDEO   REQUEST A DEMO
Supports Informed Decision-Making

PatientKeeper creates a complete, holistic picture of a patient's clinical data for the physician.

Conforms to Each Physician's Work Style

Providers can customize the appearance and usage of all screens to reflect their needs, specialties, and workflow.

Saves Time and Increases Physician Satisfaction

Having all of a patient's information displayed clearly in one place means physicians don't have to hunt for data.

With the PatientKeeper Physician Portal, physicians can focus on what matters most – patient care.

PatientKeeper Physician Portal™ is the physician-centric solution that aggregates longitudinal patient information from disparate transactional and clinical information systems. The result is a much easier and effective IT user experience for physicians, enabling them to quickly see lab and test results, medication histories, allergies, vital signs, inputs/outputs, and other important clinical information – all at the point of care.

LEARN MORE

PatientKeeper Physician Portal allows providers to customize the appearance and usage of all screens to reflect their needs, specialties, preferences and workflow. It graphs lab and test results over extended time periods to identify possible trends or complications, and presents new information in bold and generates alerts where special attention may be warranted.

> TriStar Summit Medical Center

One-Tap Access at the Point of Care

Physicians can bring their patient records to the bedside, making them a valuable patient communication and care tool.

Highest Security Standards

PatientKeeper uses AES technology to ensure the highest possible level of security without sacrificing system performance.

Streamline Rounding

PatientKeeper eliminates "chart chase" and the need to log into terminals to access patient information.

PatientKeeper lets physicians use health IT as they want to — with total flexibility.

Physicians are avid users of smartphones; nearly every doctor has one. The growth and sophistication of mobile devices has led to continued demand for and use of mobile clinical workflow applications. PatientKeeper Mobile Clinical Results gives physicians anytime, anywhere access to a comprehensive set of clinical data from virtually any device.

LEARN MORE

With PatientKeeper, physicians no longer have to hunt down a hospital workstation or navigate multiple systems to access the patient information they need. Mobile Clinical Results brings all of the patient's clinical data together on a provider's smartphone or tablet.

Screenshots   iPhone   iPad

PatientKeeper's mobile app supports physicians' clinical workflow and provides anytime, anywhere access to aggregated clinical data from disparate backend systems. The PatientKeeper Mobile Platform overlays your existing hospital systems so physicians can easily access clinical results, view enterprise PACS images, enter orders, enter charges and perform other clinical workflows -- all from within a single app on their iPad® or iPhone®. To access data, your organization needs to be a licensed PatientKeeper customer.

This application will only work in conjunction with a hospital or physician practice PatientKeeper installation. For log in information, please contact your organization's PatientKeeper representative or click the link below to request a demonstration.

With PatientKeeper's Mobile Platform, physicians can:
• Enter lab, medication, diagnostic imaging, dietary, consult, and other orders.
• Enter charges for each patient visit/encounter. Easily identify visits with missing charges.
• Document clinical procedures and patient progress notes.
• Securely message providers and care team members.
• Review and manage an accurate, up-to-date patient list.

• Access and trend lab results from hospital-based and community laboratories.
• Review radiology, microbiology, and pathology test results.
• Seamlessly access enterprise PACS images directly from the image report within a single app.
• Review medication lists (including IV meds) and see a history of discontinued meds. Review patients' complete dispensing history (including doses not given).
• View all clinical notes including admit, progress, consult, discharge, and operative notes.
• Review an at-a-glance presentation of temperature, blood pressure, heart rate, and other vital signs as well as input/output measurements.
• Review a patient's known allergies, including substance, type (drug, food, or environment) and a description of any reaction.
• And much more
