

MANUFACTURING SERVICES & CAPABILITIES

Design is only the beginning of the process. The next step is making the design work. We manufacture our own molds, capable of a 5-micron finish, which is vital to ensuring the success of the final part. Then, our manufacturing plants execute in-house molding, painting, and metalizing of our optics. This way, everything happens in one place, allowing for a full-service operation.

PRODUCT SEGMENTS

We specialize in both technical optic parts and secondary lamp assemblies. On the technical side, we offer thick multi-shot-molded lenses, multi-shot light guides, complex optic design light guides, and multi-color lenses. Small lamp assemblies include applications like turn signal lamps, cargo lamps, and license plate lamps, among others.
