About Us

Proper

PGT INNOVATION: SET SOMETHING GREATER IN MOTION

Our division is responsible for the design and feasibility of every project. Our engineers dig into the details of the concept and find the most possible solution for making it a reality within any given constraints.

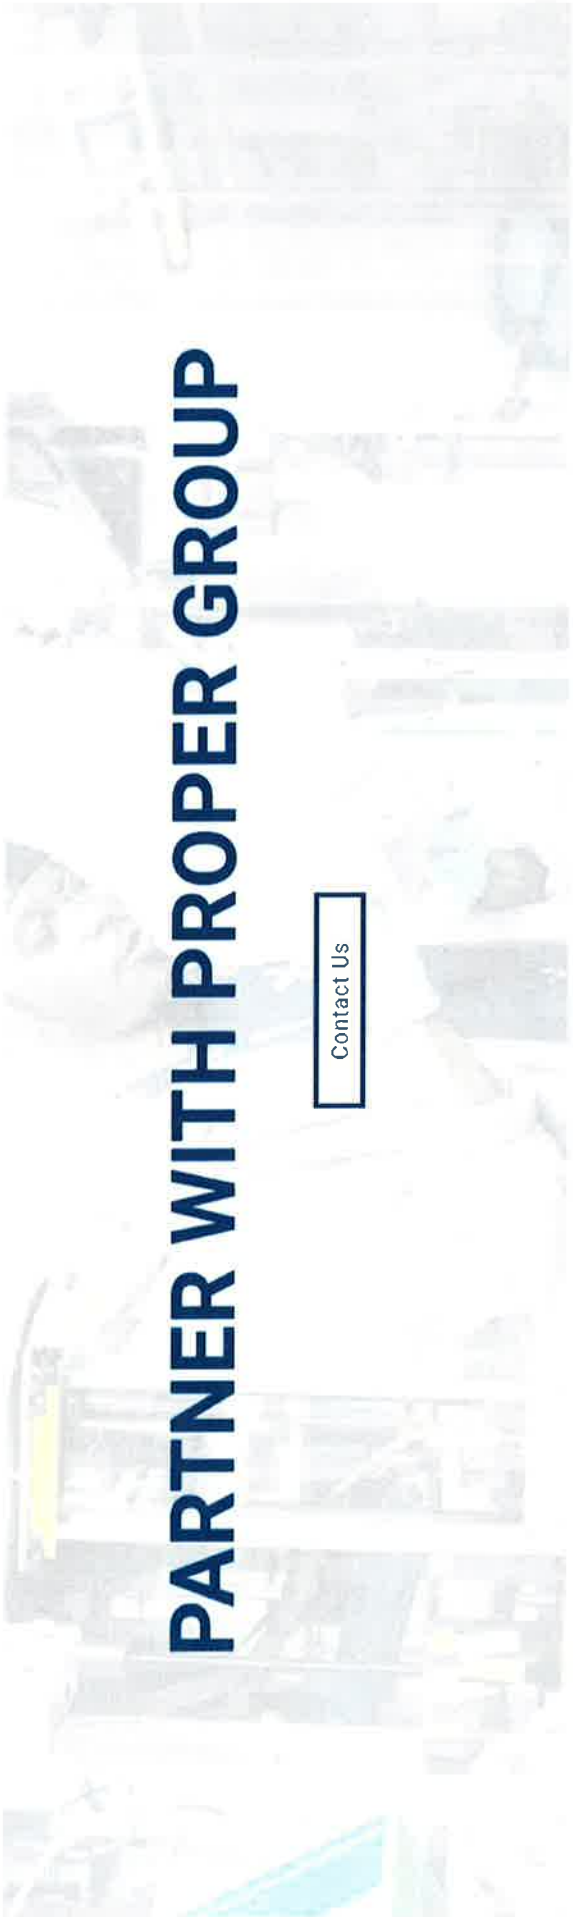

PGT OPTICS

Creating high-performance optics for lighting involves combining a set of complex elements that must all work together. The years of experience our team has gained allow us to take highly skilled approaches to designing and manufacturing these elements. Ones that are beyond the capabilities of traditional mold manufacturers.
