CHOOSING A TECHNOLOGY
SYSTEM HAVING BUSINESS IMPACT
Download Video Transcript

You know you need to invest in automating processes and providing better information to be decision makers. However, you are intimidated by the speed at which technology changes and skeptical of the value you achieved from prior purchases. You are not alone, let us help you.

Our professionals have the experience and processes to align your investments in technology with your corporate direction. In just a few weeks, you'll have the insight into how and when you can successfully introduce new technology into your organization.

Key benefits you can expect from creating a Strategic Technology Plan are:

Insight into your organization's
aptitude for utilizing and
managing technology

An evaluation of the
alignment, misalignment or
absence of technology to
support your business

Documented guidelines for
prioritizing and evaluating
future technology expenditures

Enforcement of purchasing
discipline across fiscal years

Continuity in the decision-
making process through
personnel changes

SVA | Bio-Ops
Emerging Life Science

Let us build your business
infrastructure so you can focus on
getting your product ready for
launch.

**LEARN MORE ABOUT
SVA BIO-OPS**

Major components documented in a Strategic Technology Plans:

Desired technology position - impact of technology on your organization's ability to compete in the future

Alignment, misalignment or absence of technology to support your business - used to prioritize investments

Technology standards - framework for evaluating alternatives, lowering costs and improving return on investment

Policies and procedures - method for reducing risks and industrializing usage of technology

Business continuity planning - acknowledgement that information is critical to operations and predetermining how systems are to be reinstated in the aftermath of a disaster
