Stress Echocardiography Imaging Table

The versatile Stress EchoBed® is the most efficient and cost-effective way to increase the number of echocardiograms. The Stress EchoBed® enables you to obtain echo images during and after exercise on patients who cannot use a treadmill for cardiac or orthopedic reasons. Clinical studies suggest that exercise ergometry can detect ischemia and provoke symptoms at lower heart rates, making our exercise echocardiography table a key addition to your practice.

When you order our Stress EchoBed®, you may qualify for a \$5,000 ADA IRS Tax Credit. To obtain the 8826 Disabled Access Credit form, follow this link: [https://www.irs.gov/pub/irs-pdf/f8826.p](https://www.irs.gov/pub/irs-pdf/f8826.pdf)

Our exercise/stress echo table is perfect for:

- Non-invasive Cardiologists
- Pulmonologists
- Heart Surgeons

Optional features of our Stress EchoBed® may be pictured.
