Any technology company can turn data into knowledge. The difference is that SRG Technology takes your knowledge and turns it into wisdom.

Blender™ features:

Secure, Single Sign-on with Personalized Dashboard
Authenticates the user for instant access to resources appropriate for the user's role within an agency

User Friendly Course Builder
Offers easy design/build/deliver capabilities for centralized access to all training modules with ease-of-use functionality

Content Library
Stores a complete inventory of all digital assets in a central location that users can access for real-time continuing education and training

Assessment and Records
Enables accurate performance assessment and electronic training records to ensure accountability and transparency for re-certifications, qualifications and professional development

Search Features
Provides users with instantaneous access to any information contained in the content library – current or historical

Communications and Collaboration
Fosters exchange of knowledge and solutions through agency-wide notification, department alerts, moderated discussion boards and news feeds

Knowledge Checks and Testing
Offers a powerful assessment engine allowing course authors to quickly build an item bank of test questions (and answers) – including multiple choice, true/false, essay, short answer, image mapping, matching and Likert scale

Certificate Management
Customizes course certificate to the individual user and creates a central online repository for all of a user's certificates
