

Episode Performance Manager™

Manage and track your entire episode of care, including post-discharge.

With the evolution of alternative payment strategies like bundled payments, a new heightened focus will be placed on managing post-discharge care and cost within the entire episode. Understanding your Medicare claims data, as well as post-discharge patterns and effectiveness, could prove to be challenging without the proper support.

Understanding your episode costs.

Episode Performance Manager takes in raw claims data provided by CMS and helps you quickly identify cost drivers and opportunities for improvement under Medicare's [Comprehensive Care for Joint Replacement \(CJR\) model](#).

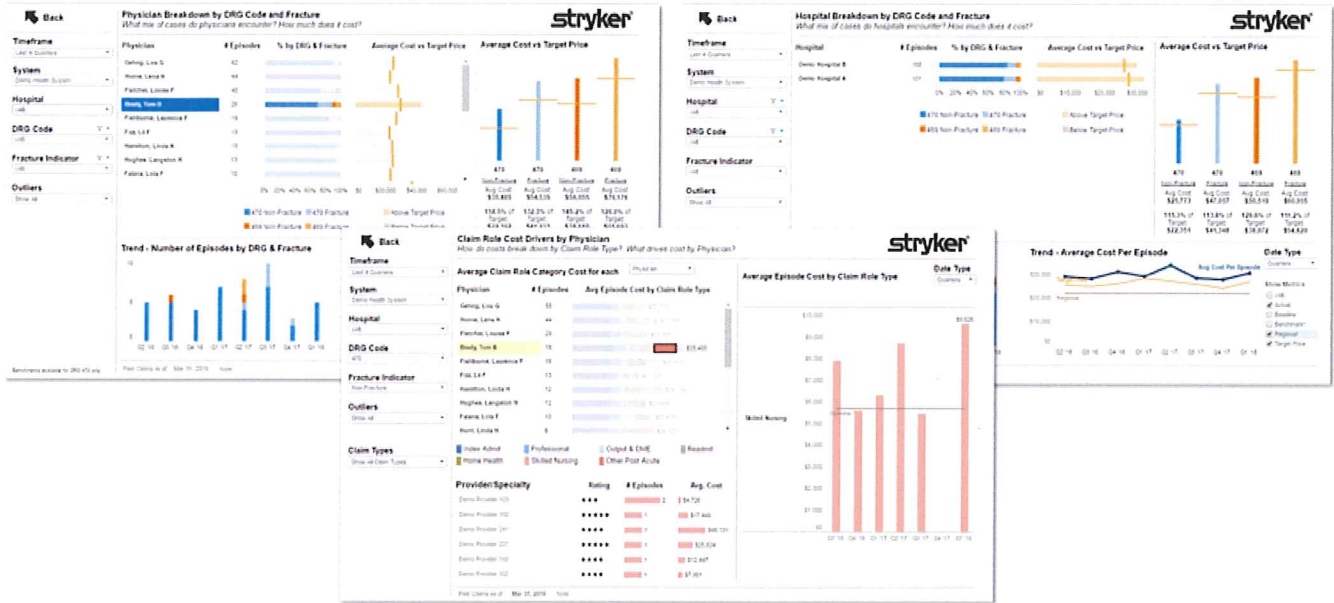

Episode Performance Manager will allow you to:

- View a quick summary of your results with key performance indicators to compare your performance relative to your baseline
- Compare multiple hospitals in your health system to the average costs of your CJR region
- Drill into your case mix and episode costs for individual physicians
- Understand the post-acute utilization trends by individual physicians
- Quickly compare the average cost by claim type for all physicians to identify the major cost drivers
- Understand skilled nursing utilization, length of stay, CMS star quality rating and costs per physician
- Understand where patients are being readmitted and the associated costs by DRG and MDC

Manage and assess your Post-Acute Care (PAC) providers.

Providers can use this detailed analysis to view the effectiveness and efficiency of your post-acute care providers through their CMS star quality ratings. This detailed analysis can be used to help create a network of preferred PAC providers.

Partnership

Program Literature

Why partner with Stryker Performance Solutions?

Episode Performance Manager offers:

- the ability to filter cost drivers to analyze performance across various parameters, including:
 - time-frame
 - first-site-of-service post-discharge
 - physician
 - fracture status
 - DRG code
 - high cost claimants
- a dedicated Performance Analyst who provides regular data reviews to help you understand where episode cost improvements can be made
- the ability to benchmark your performance against key performance indicators such as cost vs. target price, post-acute cost, discharge to home and readmission rate
- average episode cost and discharge distribution by setting benchmarks based on the top performing Marshall | Steele™ destination centers
