

SkyLink™

Cloud-based EMV Terminal Interface

Connecting application software to the TranSafe® payment gateway is easy with **SkyLink™** — a cloud-based interface for EMV card terminals. The **SkyLink™** interface makes integrating easy, with no need for installing software or drivers. **SkyLink™** works with both locally-installed and cloud-based application software, so any application that can communicate with the TranSafe® payment gateway host can perform EMV card transactions. The **SkyLink™** interface accepts all card types, and supports contact and contactless EMV, ApplePay, Google Pay, magswipe, and manually-keyed transactions. With **SkyLink™** you get "plug-and-play" access to fast, secure, PCI-compliant payment processing on the high-reliability TranSafe® payment gateway.
