Value-Added Services to Further Enhance your AI Goals

Image De-identification

Life Image helps to protect patient information and promote accelerated research development. Life Image's industry-leading program evaluates and validates market tools for their ability to remove PHI/PII from both the image pixels and metadata. In addition, Life Image offers an enhancement service that uses a combination of machine learning and human validators to further augment the baseline tools in order to achieve accuracy levels near 100 percent. **Contact us**.

Data Curation

Life Image creates curated datasets that are "analysis ready" for specific clinical endpoints related to breast, lung and spine outcomes. **Contact us**.

Product Adoption or Pilot Programming

Life Image can leverage its long-standing relationships with specialty hospitals, academic medical centers and community hospitals to help enable your product adoption or pilot programming goals. **Contact us**.

About Real World Imaging™ RWI™ Real World Imaging Data™ and RWID™

These services provide medical imaging and its related diagnostic, treatment, pathology, and other associated information for use as part of a healthcare organization's real world evidence, such as those conducted by life sciences for therapy or device development, for researchers for clinical researchers, or for use in artificial intelligence software creation, improvement, validation, or maintenance efforts.
