COVID-19 IgG/IgM Rapid test cassette
(whole blood/serum/plasma)

Colloidal gold method for primary screening

Can quickly detect negative positive

This product can be directly supplied to hospitals, medical institutions
or laboratories through the local supply chain of the host country.

It belongs to three categories of medical devices in China.

At present, the new coronavirus kit is definitely to be used in hospitals
or laboratories, and cannot be sold in OTC of drugstores.

Product Details:

BGI product

Real-time fluorescent RT - PCR kit for detecting COVID-19

1. First, we need to collect samples, extract RNA and reverse transcribe it into DNA.
 2. QPCR test with qPCR instrument and reagents in kit
 3. After the experiment, the virus concentration was determined by analyzing the CT value of qPCR.
- The above experiments can only be carried out with certain operating skills and foundation.
