# PTV Docking Station

The PTV Docking Station supports the EnVe ventilator on either the roll stand or wall mount. Docking Stations can be strategically placed throughout a hospital for power and communication. Redocking at your destination automatically starts real-time data transfer to networked medical records and provides power to the EnVe.
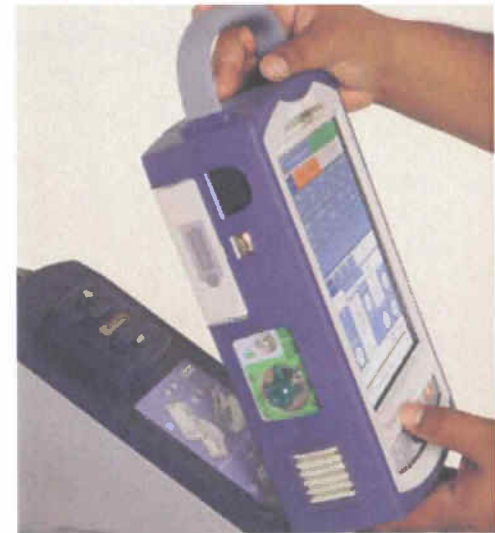

The Docking Station provides information in two ways: First, the VOXP communication protocol links the EnVe ventilator to monitoring and HIS systems. Second, through the PTV Smart Card, all patient trend data can be downloaded to a computer for data analysis.

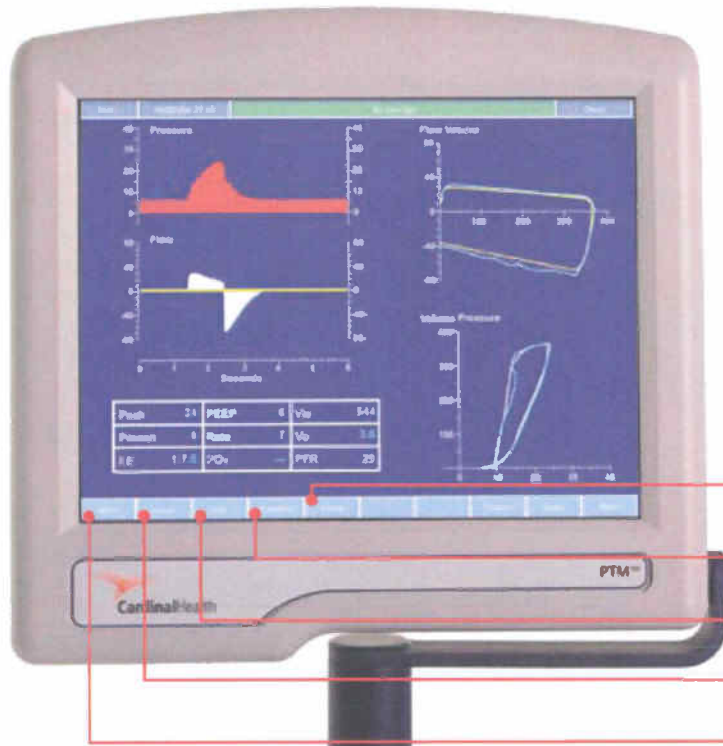

The EnVe can be easily wall mounted or mobile on the roll stand.

PTM

The optional PTM provides a comprehensive graphic package that is configurable in both appearance and layout.

One touch release for easy undocking

Displays 24 Hour trended patient data

Incorporates waveforms, loops and monitors on one screen

Data Screens display patient information and are configurable

Flow/Volume, Volume/Pressure Loops

Pressure, Flow and Volume Waveforms

Summary Screen Shown
