

GLORY

SK-100B/100C

Casino kiosk (SK-100B) and
ATM casino kiosk (SK-100C)

Eye-catching LED illumination attracts patrons to redemption kiosk. Advanced web monitoring function improves management capabilities. User-friendly ATM, ticket redemption and bill breaking casino kiosk.

Glory Global Solutions is a World Expert in cash management, delivering technology and solutions that provide security, productivity and innovation to our customers. These solutions are supported by the technical expertise of GLORY Group of Japan, the pioneer in development and manufacture of money handling machines across the financial, retail, vending machine, amusement and gaming industries for nearly 100 years.

Across the world, Glory Global Solutions is trusted by thousands of organisations to ensure their cash is managed securely and efficiently whilst delivering the ultimate in productivity. 2,500 professionals, including over 1,300 service and support staff and 350 business partners cover over 128 countries delivering these solutions – wherever money moves.

Kiosk functions – SK-100B/100C casino kiosk

Enhanced speed, ease and convenience, the SK-100B/100C offers user-friendly, one-stop services for ATM, ticket redemption and bill breaking, setting a new standard in casino kiosk performance.

Attractive appearance, easy operation

With its rounded design and eye-catching multicolor LED illumination, the SK-100B/100C is a stylish addition to casino decor. Operating tips are displayed on the large, bright, easy-to-see 15-inch touch screen. The banknote validation/hopper section is positioned at a convenient height and features flickering lights that make it easy to find the insertion and dispense points. Casino patrons will appreciate the SK-100B/100C's outstanding ease of use. Casino operators will appreciate its many advanced features.

Even higher transaction throughput than our previous model

The SK-100B/100C features a multiple-ticket pay-off function that can process up to 10 tickets at the same time. Combined with a 30% higher transaction speed than our previous model, this function reduces pay-out waiting time for patrons and lets the SK-100B/100C efficiently serve a continuous flow of patrons.

Operation can be customised to suit specific needs

When a minimum dispense count or partial bill breaking dispensing is set, the SK-100B/100C greatly reduces the need for patrons to break bills after receiving pay-outs. The display language can be set to English, Spanish or Chinese. The SK-100B/100C can also be customised to display casino-specific messages or information for patrons.

Greater bill holding capacity: five cassettes, 3,000 bills each

Boasting the largest capacity in its class, the SK-100B/100C minimises the need to refill the bill cassettes during times when the casino floor is busy.

On-screen menu improves maintenance ease

Instant cassette ID entry method helps the operator to process drops/fills quickly and easily. Overall maintenance is easier with an interactive screen and illustrations to guide the operator.

User-friendly ATM and ticket redemption interface capabilities

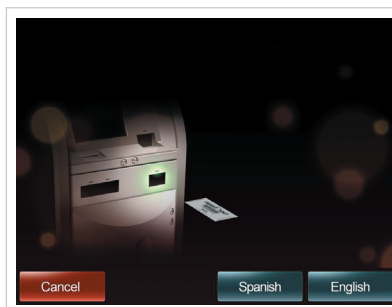

The SK-100B/100C casino kiosk is a multi-function, self-service unit that provides patrons easy and convenient access to conduct ATM transactions, with ticket voucher slot for casino redemption and other cash related services.

Database in the SK-100/100A for system redundancy

Because transactions are recorded and stored in a local database on the kiosk, the SK-100B/100C can continue serving patrons even if communication with the server is interrupted. This prevents inconvenience to your patrons.

Maintenance guidance screen

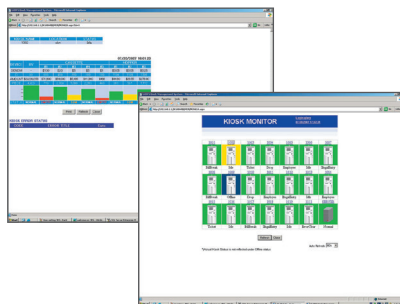

Server functions – ISP-301 Glory Kiosk Management System

Real-time monitoring of machine activity and data acquisition with enhanced management solutions accessed from the web.

Web monitoring

A web browser allows anyone with access privileges to connect to the server via the web. Icons displayed on the screen make it easy to monitor the status of all connected kiosks. Click on one of the icons, and the screen displays an easy-to-understand graph showing the number of tickets, bills and coins in the selected kiosk.

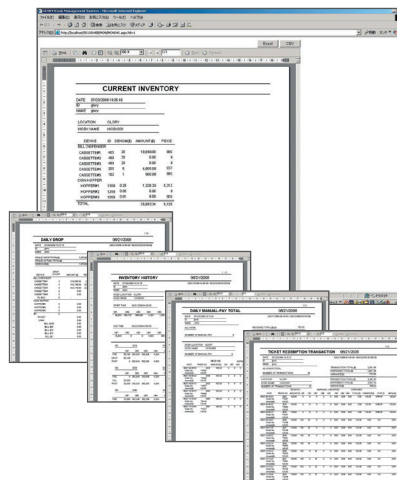

Regarding security risks in the distance operation of server Web applications

When accessing the Kiosk Management System from a distance via the Internet, the server must be open to the Internet. When the server is open to the Internet, there is an increased risk of data leaking or being altered by malicious users, unauthorised access to network computers, and virus infections. This application is to be used at the risk of the user, and robust security measures must be provided.

Report and file export

The SK-100B/100C can output data in a variety of forms. A wide range of report formats are available and formulated for gaming and non-gaming transactions for easy and accurate reconciliation. In addition, report files can be exported to Excel or output in CSV format, making it easy for a casino to produce its own original reports.

System maintenance

Kiosk status information can be automatically e-mailed to a specified address

Information on the status of connected kiosks – for example, when a bill cassette is empty – can be automatically e-mailed to a preset address. The person notified can then alert the casino staff so they can take prompt action.

Remote control of settings and functions

From the server, you can control a variety of operations on any SK-100B/100C unit connected to the system. Controllable operations and settings include shutdown, status change and server database connection.

Other features

The SK-100B/100C supports Windows Active Directory. This lets you use accounts registered in Windows to set IDs and passwords.

An improved data archiving and backup function provides better data security.

Clustering server system support

The Kiosk Server supports third-party clustering servers. It also provides redundancy for improved data safety.

SK-100B/100C Technical Information

Dimensions (WxDxH)	740mm (29.1") x 856mm (33.7") x 1516mm (59.7")
