Connect to receivers by Quick Connect Code™ instead of searching a list.

Bluetooth Discovery **NEW**

Certain Bluetooth-enabled devices are now discoverable!

Pause Feeds **NEW**

Multiple Destinations **NEW**

Connect to any number of receivers at the same time.

Audio Only **NEW**

Stream lossless audio without video to devices.

Recent Connections **NEW**

Recently-used receivers appear at the top for quick reconnecting.

5.1 Surround Sound **NEW**

USE THE RECEIVERS YOU KNOW AND LOVE

AirParrot supports numerous media receivers. Connect and stream content to hardware devices like Apple TV and Chromecast. AirParrot also works great with software receivers like Reflector. Mirror audio around the house to AirPlay-enabled speakers. Regardless of budget or preference, AirParrot works with the devices found in most homes, schools and businesses.

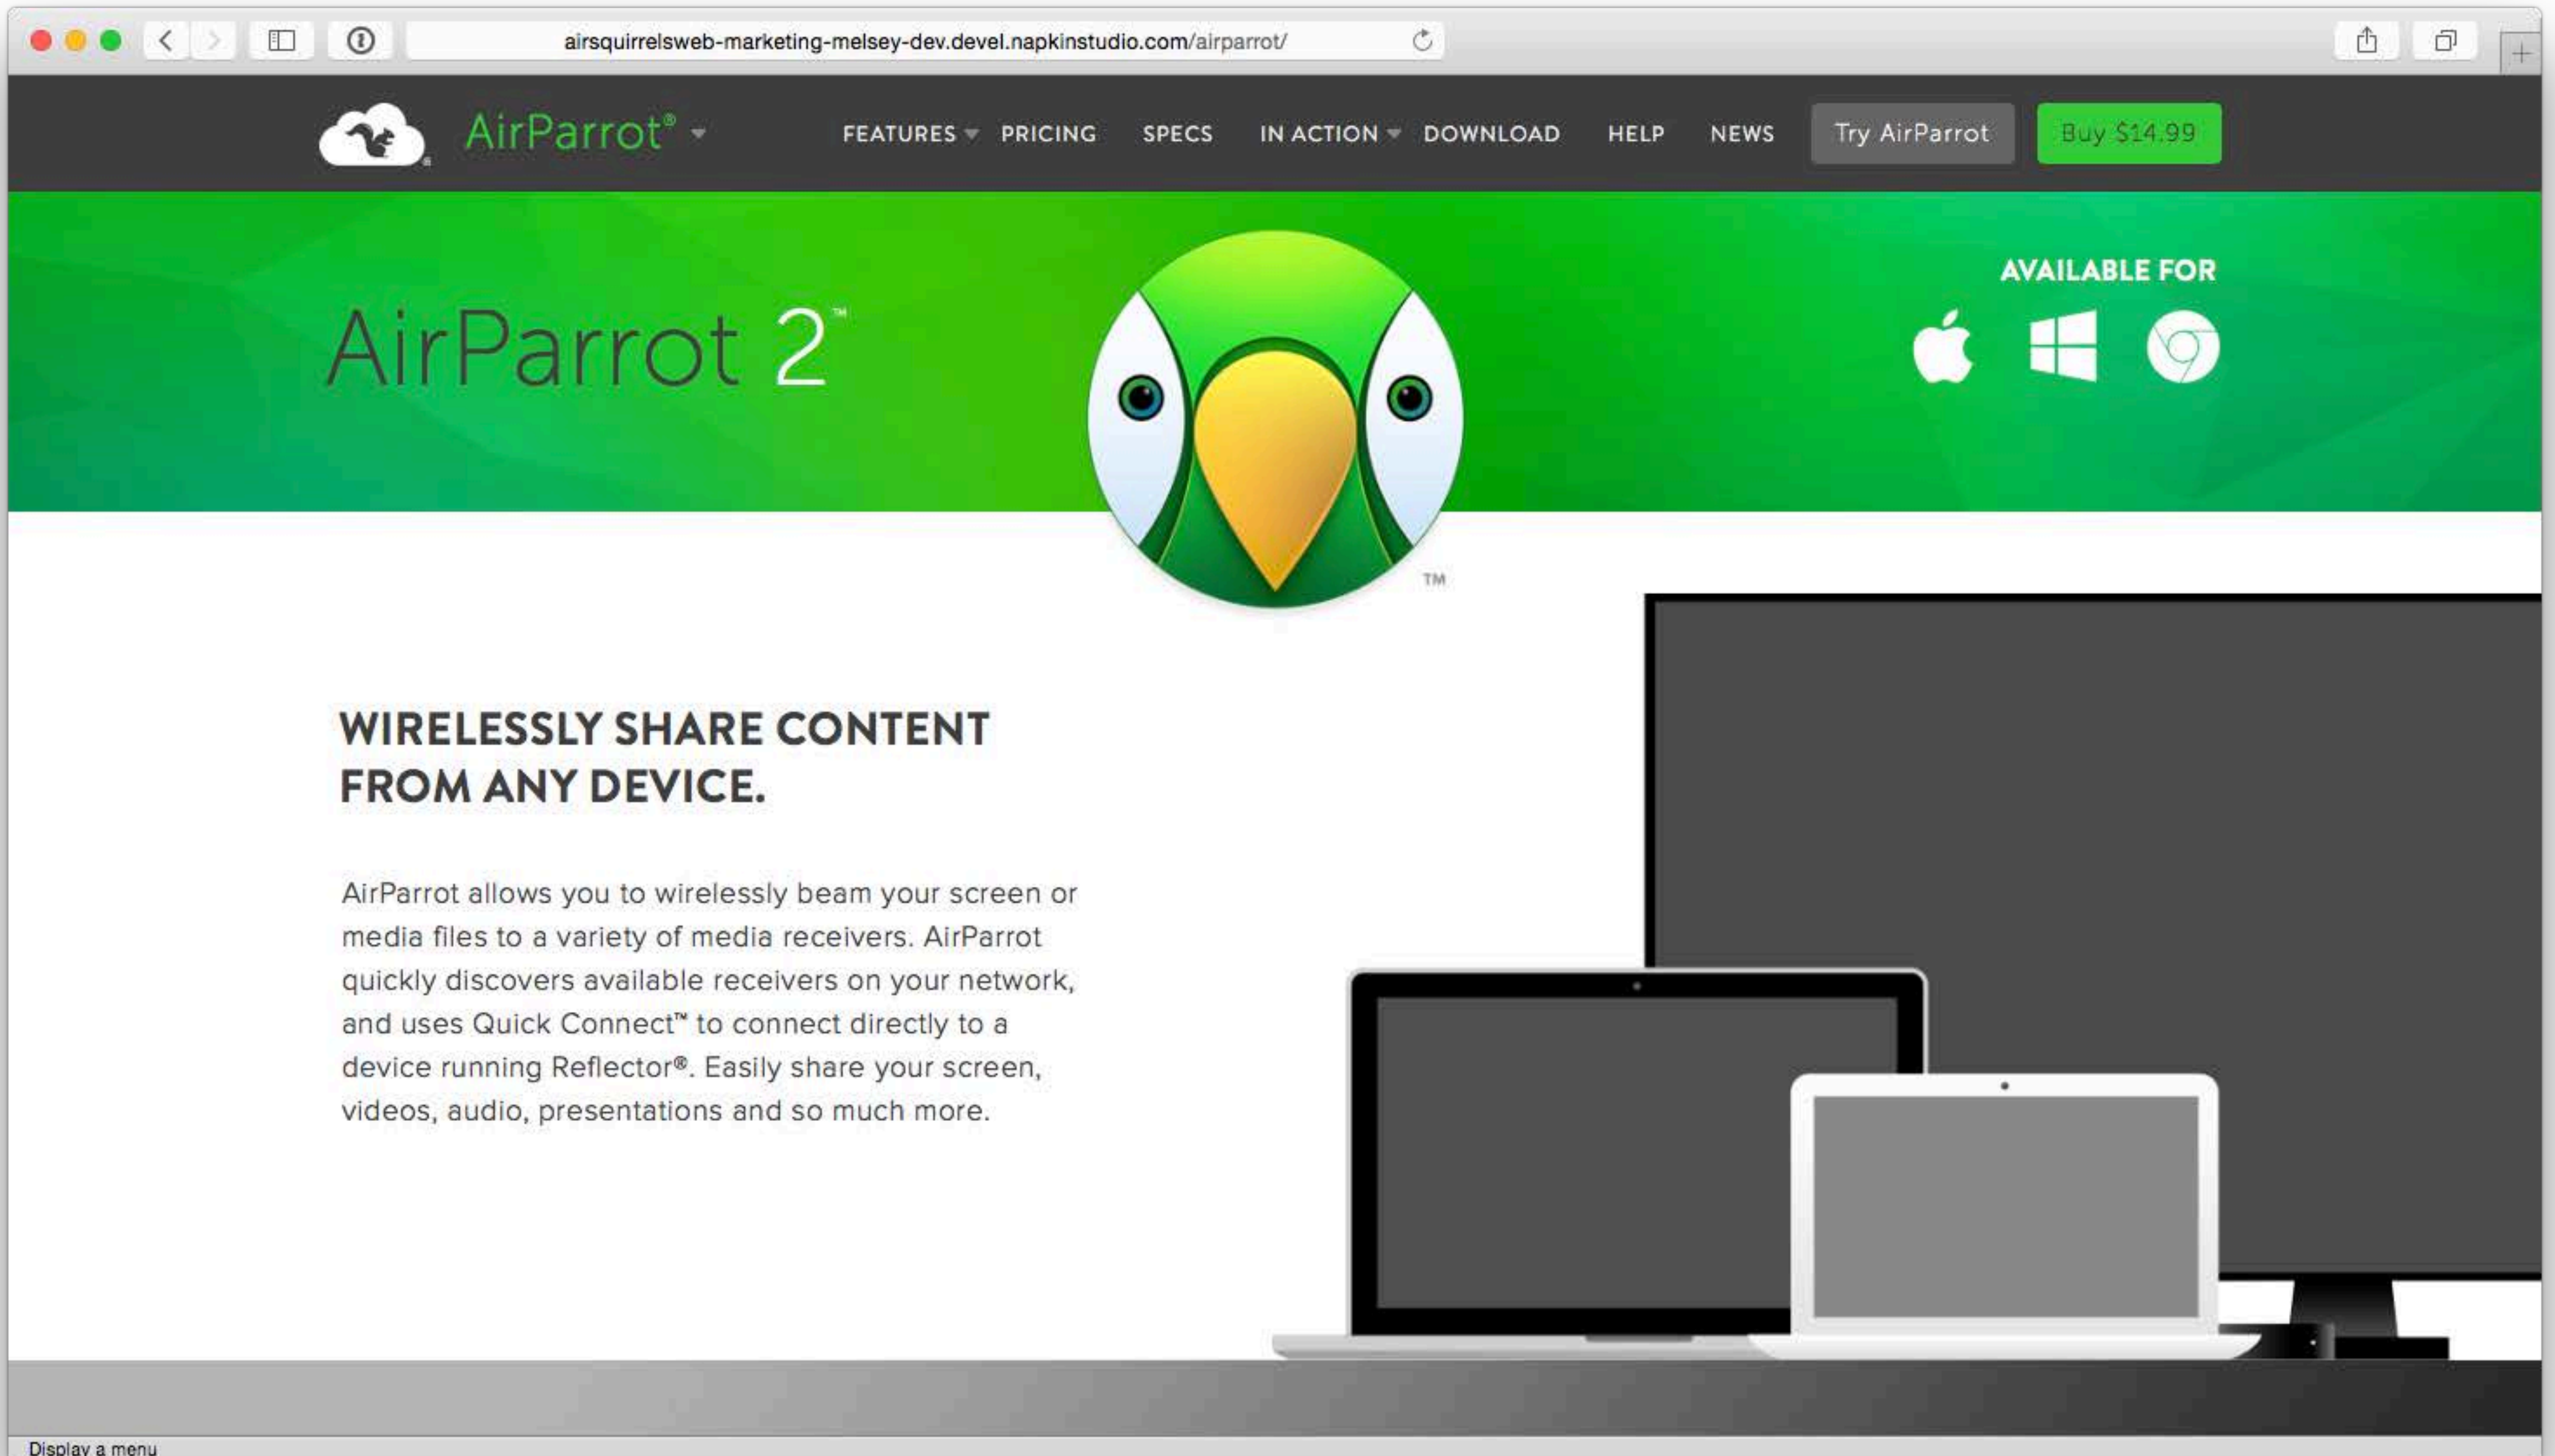

MIRROR AND STREAM TO MULTIPLE DESTINATIONS AT ONCE

Display your screen and media files to any number of receivers at the same time. Surround yourself with the music, videos and media that you love. Mirror or stream video and audio together or stream audio only. The possibilities, and devices you can connect to, are unlimited.

CONNECT WITHOUT HASSLE

Our patent-pending Quick Connect™ technology and Bluetooth discovery make connecting over diverse and complicated networks a breeze. Use these features to connect to receivers when auto-discovery and multicast traffic aren't available or when subnets divide your devices. Recently-connected devices appear at the top when they're available to fast track mirroring and streaming.

AirParrot 2™

AVAILABLE FOR

WIRELESSLY SHARE CONTENT FROM ANY DEVICE.

AirParrot allows you to wirelessly beam your screen or media files to a variety of media receivers. AirParrot quickly discovers available receivers on your network, and uses Quick Connect™ to connect directly to a device running Reflector®. Easily share your screen, videos, audio, presentations and so much more.
