## How Comfy Works

### Comfy & Your Building

Comfy is compatible with existing building systems.

Comfy works over BACnet/IP and integrates with all major building management systems

Comfy works best with variable air volume

Installation is easy: we do all the heavy lifting.

A single piece of hardware is quickly and easily installed on-site adjacent to your BMS.

The remaining 4-6 weeks of setup is completed

Comfy works best with variable air volume systems or other fast-responding HVAC systems

The remaining 4-6 weeks of setup is completed remotely by Building Robotics.

### Comfy & Occupants

Occupants login to Comfy, select their location, and make a request

Warm or cool air is delivered to their space

Comfy allows occupants to learn both their own and their neighbors' comfort preferences

### Comfy Over Time

### Machine learning provides dynamic temperature

Comfy learns people's preferences over time and optimizes spaces based on both comfort & energy  
Machine learning helps Comfy save 15-25% of HVAC energy.

### Building and Real Estate teams can access the Comfy Monitoring Interface

Provides real-time information about who is using Comfy & where, and where small adjustments can be made to its operation.
