## Hardware, Software and Humanware

The D-BOX Theatrical Solution is made of specialized hardware and software that store, manage and transmit motion codes to the special D-BOX enabled cinema seats installed in your auditoriums. The result is an incredible immersive cinematic motion experience, which is in sync with the action on the screen, immersing viewers in the movie to the point where they literally feel part of it. Such cinematic magic takes much more than hardware and software. It takes talent. What makes the experience one that connects on such an evocative, true-to-life level is the virtuosity of our motion designers. These gifted artists design and program each and every movement of the D-BOX enabled cinema seats to reflect the actions and emotions portrayed in the movie.

With over 190 movies specifically encoded for theatrical presentation, and more than 400 screens worldwide, the unique D-BOX Theatrical Solution is well proven and its immersive cinematic motion experience loved by millions.

“ *I have had the great opportunity to work with D-BOX for many years. D-BOX and their motion designers create an incredible experience that continues to bring in increased numbers of highly satisfied guests year after year.*

— James Hieminga, General Director, Cineplex Brossard

D-BOX Technologies Inc. designs, manufactures and commercializes cuttingedge motion systems intended for the entertainment and industrial markets. We offer the most optimized, interoperable, engaging and easy-to-deploy motion system on the market.

D-BOX unique patented technology can be used in different applications to generate the most realistic, subtle and precise motion patterns and vibrations.

## Motion Systems for entertainment and simulation

D-BOX Motion Systems and motion codes are built to transfer back true-to-life motion and vibrations from the screens to the viewer. No matter the context D-BOX Motion Systems will transfer motions and vibrations from the virtual world to the real world.

Movie audience, Home Theatres as well as simulators trainees can feel the action and become truly part of a powerful and precise motion experience.

Motion effects are artistically scripted motion and vibrations that emulate what is happening onscreen, in perfect sync. The result is a truly immersive experience.
