Oregon Chain Saw Safety Helmet improves communication on the job

The Oregon Chain Saw Safety Helmet incorporates a unique Air Flow Control Technology system that gives you consistent noise reduction for better communication on the job. This safety helmet is made from high-impact, scratch-resistant ABS plastic and features 20 ventilation holes to let heat and moisture out making this helmet more comfortable during long days of cutting. A built-in rain gutter improves visibility by channeling rain away from your face. The highly absorbent sweatband is removable and washable and a push/pull headband system easily adjusts the helmet for a snug and secure fit. Stainless steel mesh visor flips up and out of the way when not in use. Comfortable and adjustable earmuff system has a 24-dB NRR. Meets ANSI Z89.1-2003. Replacement earmuffs, visor, six-point suspension and headband sold separately. Imported.
