

We use **technology** to enhance **human connections** that make a difference for high-risk CKD patients.

Early Detection

We use advanced analytics to identify high-risk patients so we can be proactive in their care.

Timely Education

We create engaging and accessible content that helps patients understand their condition and what to do about it.

Peer Mentorship Network

Patients want to learn from one another. We build patient mentorship networks that enable sharing and provide emotional support.

Continuous Care

Our care team uses technology to provide a layer of support beyond the clinic. We ensure patients get the attention they need to manage their disease and avoid hospitalizations.

Introducing HOPE by Cricket Health

Health Options Patient Education (HOPE) is an online education program that connects advanced stage CKD patients to engaging content and a network of healthcare professionals, peers and mentors. HOPE helps patients access clinical expertise and peer-to-peer support, empowering them to choose the treatment options that fit their lifestyle and values.
