POWERED BY MUMMS SOFTWARE

What is Hummingbird?

Smarter and Easier to Use Software for End of Life Care

Hummingbird is a new, revolutionary program for end of life care, developed by mumms Software. Our focus has been solely on hospice and palliative care for over a quarter of a century. As the natural next step to continue to innovate, we decided to leverage state-of-the-art technology to design a new platform.

The goal is smarter software that can evolve to changing technologies and regulations.

We know your job is to focus on your patients, NOT worry about using a cumbersome program.

Hummingbird was designed to let you focus on what you do best: quality patient care. It empowers you to make faster and better decisions as a coordinated team every day.

What Sets Hummingbird Apart?

- **Custom Dashboard**

Fast and easy access to data and workflows most important to you.

- **Innovative Tools and Automations**

Live status of claims, automatic eligibility checks and more make your job easier.

- **Built-in Databases and Efficiencies**

NPI Database, preloaded CBSA codes and more save you time and ensure accuracy.

- **Flexible and Configurable**

Workflows, forms, LCDs, rules, permissions and more can be customized to fit your agency.

- **Fast and Easy Updates and Upgrades**

Hummingbird uses a **multi-tenant, cloud-based, software as a service model**. All updates occur on the server, providing a seamless experience for users.

- **Every Keystroke is Saved**

Zero lost data.

- **Easy to Use**

Hummingbird is designed so it's hard to get lost. No more clicking around too many screens.

Hummingbird Components

[Hummingbird PIM \(/products/hummingbird-pim\)](/products/hummingbird-pim) (Patient Information Management)

Hummingbird PIM is the business side of the program. It follows the patient starting at initial referral through admission, discharge, and bereavement follow-up. It streamlines your operations - stores, tracks, and reports on all the people, places, and things your hospice or palliative care services require. And, the billing system electronically bills all payer sources.

[Hummingbird Clinical \(/products/hummingbird-clinical\)](/products/hummingbird-clinical)

Hummingbird Clinical has a client version which works online/offline, and a mobile device version.

Hummingbird Clinical Client can be used by ALL disciplines (nurses, aides, social workers, chaplains, volunteer coordinators, bereavement coordinators, medical directors and nurse practitioners) to allow for true interdisciplinary care planning and coordination for every patient. Charting at the bedside is easy either online or offline when you don't have an internet connection.

With Hummingbird Clinical Mobile, Medical Directors, Nurse Practitioners, and Aides can document and care plan on mobile devices like tablets (Galaxy, iPad, etc.) and smartphones (iOS or Android) without going through a third party.

[Add-Ons \(/products/add-ons\)](/products/add-ons)

mumms offers additional modules that enhance the core software with features to meet specialized needs. This includes additional billing programs, third-party interfaces, and other extras like Live Status Update of claims and real time GPS tracking.
