

MATRIXSM International delivers results across the full spectrum of information fusion operations. From information collection and analysis to real-time operational decisions and collection management operations/training, the Matrix team operates in the most intense and challenging environments. We apply our expertise in Intelligence, Surveillance and Reconnaissance (ISR) to assist clients who require real-time information to make sound decisions in complex situations. Our comprehensive, scalable services include robust operational execution, operations support, technology systems integration, and expert training tailored to meet each customer's unique requirements in a broad range of environments, from the most austere to the most developed. Clients trust us to help them navigate a complex environment of new technology and training shortfalls to achieve operational results. The MATRIXSM team actively applies our expertise, integrity, and teamwork to maximize our clients' ISR successes.

Operations and Operations Support – Delivering Expertise Today

MATRIXSM International has a long history of uncompromising success in operational execution and operations support roles. We leverage our team of experts from diverse backgrounds in military operations, law enforcement, public service and private sector to provide innovative solutions to a range of challenges including disaster relief, law enforcement, wildlife protection and military support. We thrive in dynamic, no-fail environments, whether at a headquarters or in the field.

The MATRIXSM team embodies the highest levels of integrity, service, and professional conduct. We recognize our clients' requirements to make tough decisions, and we enable them to do so with clarity and accountability.

Systems Integration and Architecture Consulting – Hardware and Software Integration and Solutions

MATRIXSM International offers proven solutions to the complexities of technology integration, leveraging years of experience designing and fielding data dissemination architectures. Drawing upon established partnerships with hardware and software providers, we design and build the systems infrastructure to process information collected from a variety of sources and platforms. We implement this infrastructure in a way that enables real-time analysis and systematic archiving, allowing on-demand retrieval of data and enhancing the quality of analytical assessments, in turn supporting critical decisions with the best possible information at the right time and the right level of authority.

Training Solutions – Developing Experts for Tomorrow

Our tiered, integrated, and customizable training programs aid analysts, sensor operators, pilots, and system specialists.

Level 1 – Basic ISR Concepts and Operations

Basic ISR concepts, technology and methods

- Aircraft and Sensor Dynamics and Theory
- Communicating and Applying Intent
- Operations Planning
- Analysis Fundamentals

Level 2 – Intermediate ISR Analysis and Operations

Analysis and Tactical ISR Operations

- Analysis Techniques
- Target Development and Analysis
- Payload Collection Techniques
- Multiple Intelligence Disciplines

Level 3 – Advanced ISR Analysis and Operations

Advanced Analysis and Complex Multi-INT ISR Operations

- Military and Law Enforcement Support
- Single / Multiple Platform Multi-Discipline ISR Ops
- Advanced Resource Management
- Advanced Analysis and Documentation

**Multiple models of intelligence collection and analysis available*
