

Carbonite Safe server backup

Recover from the point in time before disaster struck.

For the many types of data in your organization, Carbonite Safe server backup helps protect them all.

[Get started](#)

What it does

Carbonite Safe server backup can recover anything from a single file to an entire system with the click of a button. So whether you don't have an IT department or *you are* the IT department, you can rest easy knowing the data that powers your business is safe.

- Hybrid backup protects data onsite and in the cloud.
- Granular and full system protection, including image backup.
- Protect data and files while they're in use.
- Restore a full server to new or existing hardware in a few steps.
- Protect and restore Hyper-V VMs to any local or virtual machine.
- Back up Exchange Online emails, calendars and user data.
- Create and manage policies by group, role, device or any criteria you choose.

How it works

- Download the Carbonite Safe server backup software and install it on every server that needs protection.
- The software automatically backs up data to the Carbonite cloud.
- To restore data, log onto the online portal and select a recovery point and a target.
- Choose to recover files, folders or full system.

Server backup that delivers

PROTECTION

- ✓ Protect and recover anything, from files to a full system.
- ✓ Back up data from applications while people are using them.
- ✓ Choose local and cloud backup targets with separate retention policies.

RESTORATION

- ✓ Recover systems with minimal intervention.
- ✓ Choose from either a local or cloud backup.
- ✓ Restore to new hardware just like it was on previous hardware.

Additional features

Scheduling & management

Manage backups, bandwidth settings, retention, security and more from anywhere.

Security & compliance

128-bit encryption with 256-bit private key option and transport layer security (TLS/SSL).

Dedicated support

Call, email or chat with our award-winning business support team 7 days a week.
