Logic's Core Merchandising Solutions

Due to the complex, multifaceted nature of omnichannel retail merchandising operations, Logic implements, deploys and supports a complete set of solutions to ensure that we meet and surpass your organization's specific needs, whether it's to get up and running quickly with a pre-configured accelerated model or a completely tailored solution which is configured and integrated from the ground up. Our current merchandising portfolio includes:

● Merchandising Operations Management Systems

Retailers employ merchandising systems to efficiently manage foundational merchandising activities that range from enterprise data management and item set-up to initial store allocation, distribution and replenishment. These

⊞ Expand

● Price Management

Price management solutions are designed to assist your merchants and buyers in making crucial product pricing decisions and developing and testing multiple pricing strategies to reach predictable and more profitable outcomes. In many cases, retailers are so

● Accounts Payable / Invoice Matching

One of the more labor-intensive aspects of retail is the management of purchase orders, receipts and invoices to ensure that each vendor receives accurate product payments without incurring penalties. Suppliers frequently send combined or

⊞ Expand

● Perpetual Inventory/Sales Audit Solutions

Nearly every major retailer relies on perpetual inventory systems to track stock levels and the cost of goods sold. Errors in this sales information can significantly impact the accuracy of your organization's accounting and inventory positions.

● Allocation and Replenishment

In the complex landscape of multi-channel merchandising, one of the greatest and most important challenges retailers face is maintaining efficient and accurate allocation of product inventory. Ensuring that shoppers have access to their

⊞ Expand

● Trade and Import Management

In a globalized economy, import processes, procedures and orders generate a massive amount of paperwork for retailers, and it's challenging to obtain accurate cost estimates and determine actual margins. The calculation of estimated vs. actual

Development Services

Experienced software developers who specialize in the specific application programing languages, frameworks and operating systems used by the major packaged retail solutions

Let's Discuss Your Project or DevOps Needs

Development Services by Logic

As your company continues to grow and adapt to shifts in the retail environment, its business needs evolve as well. These changes often create situations where your current technology framework becomes incapable of meeting day-to-day business needs, which calls for the implementation of new IT resources and solutions. Without the guidance and experience of retail professionals who understand the complex relationship between your business and its technology systems, adapting these assets can be infeasible due to high software development costs and slow build times from providers who just don't understand retail. That's why many of the world's leading retailers partner with Logic: We specialize in the development and integration of key technology resources for retailers, empowering them to achieve their unique vision of success.

As one of the fastest-growing retail integration partners on the planet, Logic employs a host of experienced software developers who specialize in the specific application programing languages, frameworks and operating systems used by the major packaged retail solutions, including Java, Oracle PL/SQL, Pro*C and Linux systems. Through our comprehensive services, Logic is capable of solving your business problems with a combination of custom software development initiatives and industry-leading integration services. Not only can our development team extend and optimize your existing footprint, we can also design and customize solutions from the ground up, ensuring that your applications are configured to meet and surpass your business's goals.
