GOOGLE STACKDRIVER

Monitoring, logging, and diagnostics for applications on Cloud Platform and AWS

📦 TRY IT FREE

Monitoring, logging & diagnostics

Google Stackdriver provides powerful monitoring, logging, and diagnostics. It equips you with insight into the health, performance, and availability of cloud-powered applications, enabling you to find and fix issues faster. It is natively integrated with Google Cloud Platform, Amazon Web Services, and popular open source packages. Stackdriver provides a wide variety of metrics, dashboards, alerting, log management, reporting, and tracing capabilities.

Monitor Cloud Platform and AWS

Stackdriver is built from the ground up for cloud-powered applications. Whether you're running on Google Cloud Platform, Amazon Web Services, or a hybrid of the two, Stackdriver combines metrics, logs, and metadata from all of your cloud accounts and projects into a single comprehensive view of your environment.

Find and fix issues fast
