

See More. Save Time.

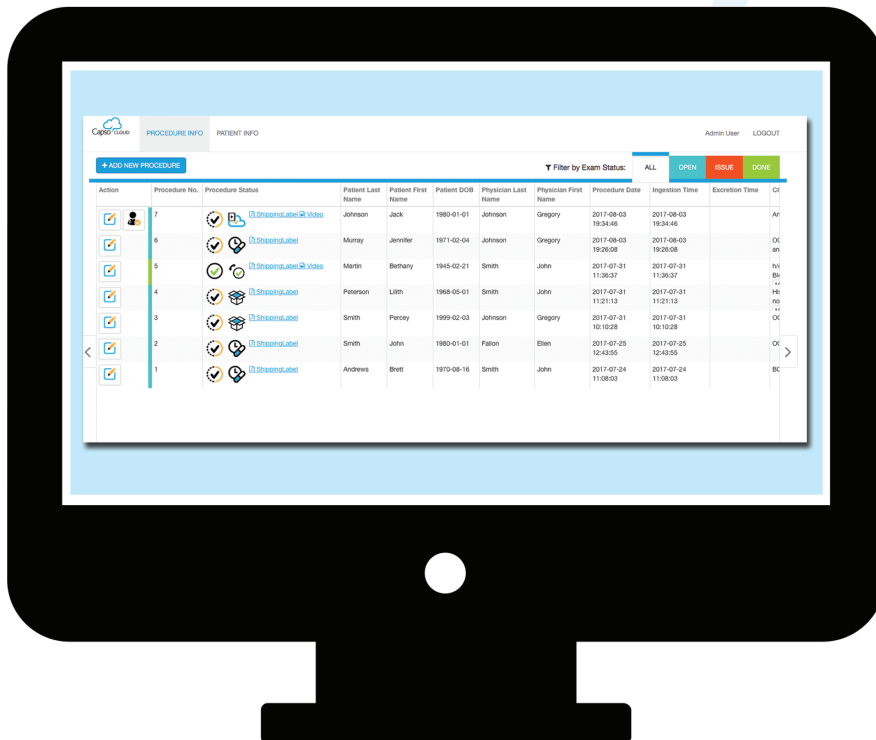

Time is money. Dealing with belts and wires required with ordinary capsule endoscopy systems can cause appointment backlogs and expend office resources. The wire-free CapssoCam Plus® Solution streamlines practice operations by eliminating the need for multiple patient visits or staff management of receiver equipment required by older capsule technologies.

Now there is an additional solution that saves you even more time.

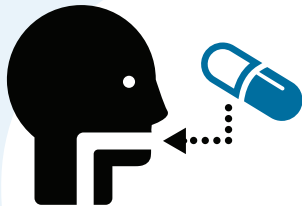

Introducing **CapssoCloud™**, the only exam management system that allows you to extract data from the CapssoCam Plus capsule without the need to process capsules post-ingestion. HIPAA-compliant and secure, CapssoCloud gives you easy access to your patient's exam data at your convenience.

A user-friendly portal that takes you right to the review.

You already see more with the CapssoCam Plus 360° lateral view of the small bowel mucosa. With the CapssoCloud portal, downloading patient videos is simple, yet secure.

Swallow to Screen in Four Simple Steps:

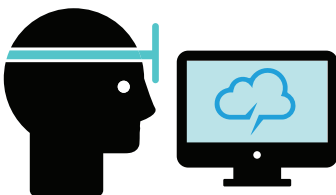

Step 1: Patient swallows the CapsoCam Plus capsule in your office.

Step 2: Patient excretes then retrieves the capsule at home and ships it in a prepaid return label envelope to the CapsoCloud Download Center.

Step 3: The CapsoCloud Download Center processes and uploads the video to the secure, HIPAA-compliant portal.

Step 4: You access the video via the CapsoCloud portal and download the patient results.

CapsoCloud also provides easy transfer of data to designated 3rd party reading services for your capsule endoscopies. Contact your CapsoCam Plus representative for more information.
