FLIR InSite is the professional workflow management tool for electrical contractors and thermographers that streamlines the thermal inspection process and simplifies data collection and reporting.

With FLIR InSite, inspectors can prepare efficient survey routes, maintain accurate documentation by assigning thermal images and survey data directly to saved assets, share information with their team through the cloud, and file instant reports while still in the field. They can then share professional, detailed reports with clients through a secure and private customer portal on FLIR InSite.
