The JNIOR Control Panel is a plug and play expansion module for the JNIC that provides the user with push buttons and status LEDs. The push buttons are easily configured via the JNIOR web page to 'trigger' user defined macros executed on the JNIOR. The macros can control the JNIOR relays, send communication messages to other devices via the Ethernet network or JN serial ports, and a variety of other 'actions'. The Control Panel LEDs are on and off as part of the JNIOR macros.

The JNIOR Control Panel mounts in a 19-inch rack and is 2U in height.
