

Aviation Safety & Loss Control

Allianz provides loss control services to our clients including safety surveys, IS -BAO consulting, flight operations, manual reviews, and Safety Management System development.

Surveys are led by Walter Kraujalis, a former flight department manager and aviation attorney. Walter holds an ATP certificate in both fixed-wing and rotor-wing aircraft.

International Standard for Business Aircraft Operations (IS-BAO)

Walter is an accredited auditor for IS-BAO and can assist flight departments with adopting IS-BAO standards. This includes a review of manuals, forms and self-audit checklists before a visit to the operation. During the visit, processes and records will be reviewed and flight department personnel will be interviewed. Pre-audits or conforming audits can also be requested.

Safety Management Systems (SMS)

SMS programs vary from operation to operation. Our Safety & Loss Control team will partner with flight operations to develop and implement a SMS program that will be effective for that operation.

Safety Survey/Risk Assessment

We recommend that every aircraft operator is reviewed by an outside entity at least biannually. Our team will conduct a thorough review for all departments and give concrete recommendations to enhance safety performance.

Available Services

- Safety Culture Surveys
- OSHA Compliance Reviews
- FOD Prevention
- Emergency Response Plans
- Hangar and Ramp Safety & Security Reviews
- Aircraft Refueling and Towing Procedures
