ArraySlide 16 chamber fits one microarray slide and sections it into 16 individual surfaces for multiple simultaneous protein, gene expression, or screening analysis studies. The unit includes lower carrier tray, upper structure plate, and gasket (patent pending). The 7 mm x 7 mm surfaces are positioned 9 mm apart in a 2 x 8 format for easy loading by multi-channel pipettes or automated robots. The chamber itself is made from a durable, flat, precision machined aluminum to ensure proper slide alignment and leak-free arrays. The top chamber face is embossed with a letter and number panel for easy identification of each subarray. A replacement 16 Well gasket is also available.
