

Explore your microbiome.

Learn about your microbiome and join the thousands who have had their microbiomes sequenced.

For citizen scientists and researchers

uBiome Explorer kits give you access to state-of-the-art tools to learn more about your microbiome. Using advanced DNA sequencing and building on research from the NIH Human Microbiome Project, we've perfected the technology to perform large-scale microbiome studies.

Researchers and citizen scientists are able to develop and execute their own independent studies with easy-to-use sampling kits, interactive insights and comparison tools using the world's largest microbiome database.

Introducing ExplorerPlus

Get deeper insight into your microbiome.

Explore how your microbiome influences your vitamin levels and metabolism.

How explorer works

1

Buy your kit

Buying your Explorer kit is quick and easy. Simply choose the bundle that works best for you, and we'll ship it to you!

2

Sample at home

Clear instructions in your kit tell you how to self-sample. It's fast and private, and takes place in the comfort of your home. Yes, really—check out how easy it is below.

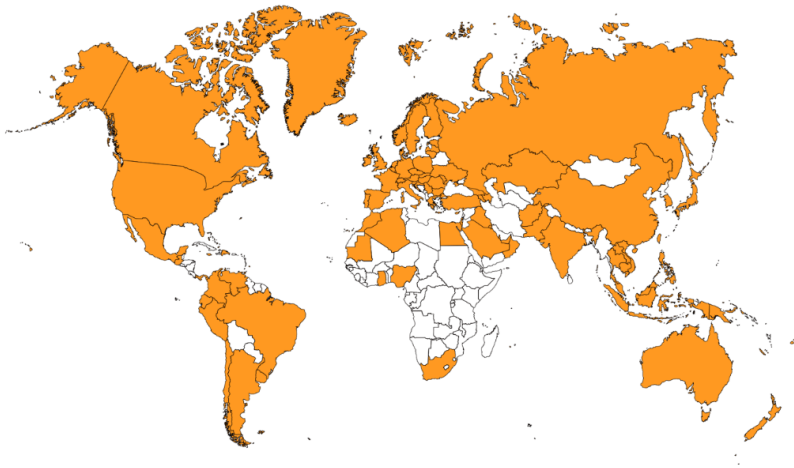

3

Return your sample and get your results

After you collect your sample, stick it in the prepaid envelope and drop it in the nearest mailbox. Once it's processed in our lab, we'll send you a link so you can download your test results.

Explorer around the world

Citizen scientists around the world are learning about their microbiomes. Please join us in our discovery process to learn more about the microbiome.

Did you know? You can monitor your microbiome.

Learn much more about your microbiome. Once a month, once a quarter or as often as you see fit, you can discover how your microbes change over time.

GUT EXPLORER FIVE SITE EXPLORER

- 1 **Sample tube**
This tube contains a special stabilizing fluid that preserves your sample during its journey to our laboratory.
- 2 **Two sterile swabs**
- 3 **Replacement sample tube**
- 4 **Sample return bag**
- 5 **Return mailer**

Exploring your results

Improve your lifestyle by understanding your flora

Immediately after we've processed your sample, you'll receive an email containing a secure online link to your results. Then you can view it confidentially at the time that's right for you.

uBiome Explorer kits are not for diagnostic purposes. Information provided by these kits is not intended to diagnose, treat, cure or prevent any disease. If you want to address a symptom or learn more about health issues, you may be interested in our clinical [SmartGut™ test](#).

"I'm having my microbiome tested with uBiome. It's the future."

Tim Ferriss Entrepreneur, New York Times Best-Selling Author, and Microbiome Geek

Interested in more than exploration?

Our healthcare provider-ordered SmartGut test may be right for you.

Looking for actionable insights? Need a test that detects beneficial and pathogenic microorganisms associated with specific infections, lifestyle choices, and gut conditions including Inflammatory Bowel Disease (IBD) and irritable bowel syndrome (IBS)? Learn about SmartGut, the first sequencing-based clinical microbiome screening test.

uBiome's social mission

uBiome's mission is to advance the science of the microbiome and make it useful to people. Through our research with thousands of citizen scientists and dozens of universities, including Harvard, Stanford, UCSF and others, we have gathered millions of data points and built a set of tools that have enabled us to create clinical tests for healthcare providers and patients.

For people

We are committed to empowering people to understand and take greater control of their health. Through our uBiome Explorer kits and our microbiome database – the largest in the world – we give people access to tools to better understand the microbiome.

For science

To advance the science of the microbiome, we work with over 1,000 researchers from around the world at institutions such as Harvard, Stanford, UCSF, University College London, and the National University of Singapore.

For the world

We also work with over 150,000 citizen scientists in more than 80 countries. Our projects include large-scale citizen scientist studies, partnerships with researchers and organizations, and support for underfunded scientific discovery via our \$1 million Microbiome Impact Grant Initiative (as part of the White House National Microbiome Initiative).
