SIFT

Welcome to SIFT
Advanced metadata tagging

File tagging is the problem. Meet the solution.

SIFT (Secure Integrated File Tagging) is a comprehensive metadata tagging solution. It is designed to help organizations protect highly sensitive information, while making valuable information discoverable. SIFT leverages advanced OCR algorithms and machine learning technology to identify keywords in any file, whether searchable and unsearchable, and tags such files accordingly. Once tagged, files can be protected, controlled, and discovered.
