## Accurate and efficient breeding

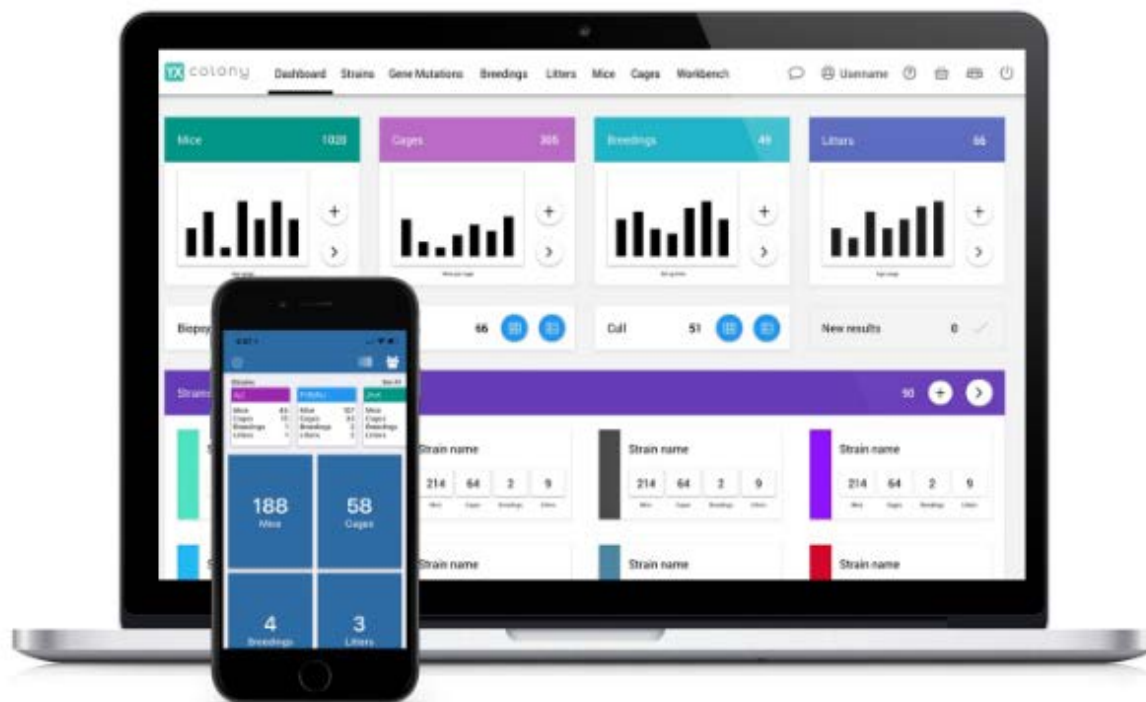

Create greater efficiencies by accessing, updating, and sharing your data in real time wherever and whenever.

**Simple assay integration**

**Drag-and-drop cage management**

**Cloud-based data sharing between labs**

At Transnetyx, we believe that the three R's (refinement, reduction, and replacement) are key to efficient, humane research. With streamlined communication and convenient task management, our Colony software promotes efficient practices and reduces the number of non-scientifically useful animals.

## Get started with a demo

Enter your enrollment key at the link below to try out the Colony software. If you don't have an enrollment key, you can enter the key **PLAYGROUND** to explore the software.

**TRY COLONY**

## Share colony with your lab

Want to set up your own group and begin using Colony in your lab? Contact our team to get a personalized enrollment key and begin sharing your data.

Try Colony for iOS

Simplified breeding data

## Automate your data

Data is automatically updated via the cloud in real time. When internet access is not available, lab animal professionals can record data in offline mode — Colony will sync the data when internet access is restored. Plus, genotyping results from Transnetyx will be automatically applied to animal data as soon as they're ready.

## Reduce human error

When everyone is using the same data, there's less room for error. The Colony software is easy to use, and provides integrated task management to help you avoid wasting time resources.

## Setup with ease

Our iOS app has integrated barcode scanning to simplify racks and rooms setup and makes your animal counts simple and convenient.

## Easy integration with automated genotyping

Transnetyx Automated Genotyping users can easily order, review, and assign genotype results directly in your software. No manual entry. No messy spreadsheets.

## Transnetyx Colony webinars

Get detailed insights into how Colony can help you make your lab more efficient and accurate. Take a look at the webinar series from our experts.

## Upcoming webinars

### **Colony Overview Webinar – Tuesdays**

Join us for a Tuesday webinar.  
Follow the link and register for a  
date and time that works for  
you. The Colony implementation  
team will walk through the  
colony management software  
and its features.

### **Colony Overview Webinar – Thursdays**

Join us for a Thursday webinar.  
Follow the link and register for a  
date and time that works for  
you. The Colony implementation  
team will walk through the  
colony management software  
and its features.

# FREE TRIAL

See how fast, easy, and accurate we are. We'll genotype 25 samples for you absolutely free.

- More than 20,000 (real-time PCR) assays in stock
- More than 10,000 MGI and JAX lines available
- Available for **mice**, **zebrafish**, **rats**, and more

No contract. No minimum. No obligation.
