THE PHYTOLOGIX™ ADVANTAGE

A fully indexed research resource, PhytoLogix™ allows us to quickly search through tens of thousands of ethnomedicinal plants categorized by traditional and historic uses. From the obvious to the unusual, PhytoLogix™ is one of the world's largest information sources for predictive discovery of ethnomedicinal plants. This shaves considerable time from the front end of the research process.

PhytoLogix™ is a proprietary technology platform that includes Bioprospecting, Bioinformatics, High Throughput Purification and Structure Dereplication processes.

- An extensive collection of more than 8,000 medicinal plants.
- Proprietary informatic database with traditional, historic usage and modern research of the collected plants, access to a structure database with over 170,000 natural products.
- A natural product library with over 9,000 plant extracts and more than 200,000 HTP fractions ready for high throughput screening.
