INFORMATION MANAGEMENT SYSTEM FOR ENTERPRISE AND FACILITY WATER MANAGEMENT TEAMS

phiAnalytics™ is a customizable cloud-based system used by enterprise and facility water management teams from healthcare, hospitality, commercial, education, retail, food & beverage, and government buildings to:

- ✓ Achieve regulatory compliance (ANSI/ASHRAE Standard 188)
- ✓ Prevent disease and injury from *Legionella* and other pathogens
- ✓ Improve water and energy efficiency
- ✓ Optimize total cost of their water systems.

EMPOWERING YOUR COMPREHENSIVE AND DEFENSIBLE WATER MANAGEMENT PROGRAM

Collaboration

phiAnalytics™ empowers collaboration among enterprise and facility water management teams.

Documentation

phiAnalytics™ empowers water management teams to efficiently and effectively create and store all WMP information.

Verification

phiAnalytics™ empowers water management teams to verify the program performance.

Validation

phiAnalytics™ empowers water management teams to validate program effectiveness.

Collaboration

The first and most important step of developing a water management program is forming a cross-functional team with the accountability and responsibility for managing water and setting program goals. phiAnalytics™ empowers collaboration among enterprise and facility water management teams with features like:

- ✓ Customizable Management Dashboards
- ✓ Enterprise Organizational and Site Management
- ✓ KPI Management and Tracking
- ✓ Action Item Tracker

Documentation

Because defensible documentation is essential and required for a water management program, phiAnalytics™ was designed to empower water management teams to efficiently and effectively document and store all program information, including:

- ✓ Process Flow Diagrams
- ✓ System Analyses
- ✓ Program Controls Summaries
- ✓ Water Management Team Meeting Notes

Verification

Verification is the initial and ongoing assurance that the program is being implemented as designed. phiAnalytics™ empowers water management teams to verify program performance through its built-in quality assurance features such as:

- ✓ Data Collection Forms for Operators and Vendors
- ✓ Notifications and Alerts
- ✓ Real Time Water Quality Monitoring
- ✓ Verification and Corrective Action Logs

Validation

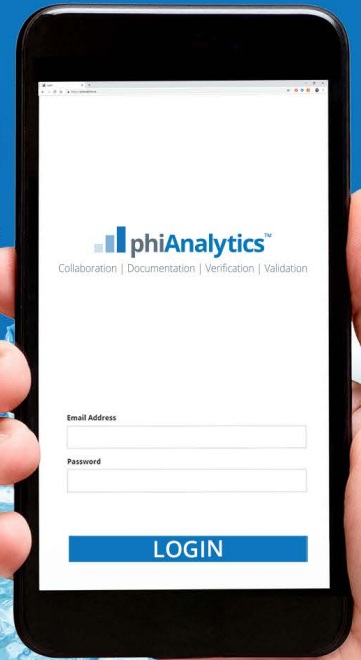

Validation is confirmation that the program, when implemented as designed, effectively controls hazardous conditions and optimizes efficiency opportunities. phiAnalytics™ empowers water management teams to perform program quality control and observe effectiveness through:

- ✓ Testing Dashboards
- ✓ Testing Reports
- ✓ Schedules and Logs
- ✓ Validation Response Guidance

Jan 07, 2019, 15:10 ET

WARRENVILLE, Ill., Jan. 7, 2019 /PRNewswire/ -- Phigenics announces the introduction of their new enterprise and facility information management system, phiAnalytics™.

Facility management and infection prevention professionals are leading efforts to prevent disease and injury from *Legionella* and other waterborne pathogens, however in order to meet the demands of their organizations, efforts must be balanced with increased demands for energy and water efficiency improvements and cost optimization initiatives.

To achieve measurable results for these safety and efficiency demands, organizations need tools that facilitate effective, cross-functional collaboration, provide defensible documentation, and deliver robust program verification and validation. phiAnalytics cloud-based information management system designed to empower leaders in water management to meet these needs and achieve compliance with water safety standards and best practices such as ANSI/ASHRAE Standard 188, CMS Memo S&C 17

phiAnalytics is included with all Phigenics Comprehensive and Defensible Water Management Programs and is the first information management system to also incorporate tools for implementing and monitoring water efficiency best practices. phiAnalytics is specifically configured for each organization's individual building water systems, delivering the most defensible water management program implementation on the market.

Those interested in learning more about how to achieve compliance with building water system regulations, reduce *Legionella* risk, save time, and enhance the defensibility of water management programs through robust information management and documentation are invited to attend an informational webinar on February 5 at 11AM ET.

To schedule a phiAnalytics demo with a Phigenics Support and Training Center team member, please visit: <https://info.phigenics.com/phianalytics> or email phiSAT@phigenics.com.

About Phigenics

Phigenics (the Independent Leader in Water ManagementSM) sells comprehensive water management programs. Facility managers and building owners use these programs to optimize the total cost of their water systems by improving safety and efficiency. The programs include regulatory compliance, data management and water testing analytical services. As a non-conflicted, third party, Phigenics provides independent verification and validation that programs are defensible and water management goals have been achieved in the most cost-effective manner.
