

Getting started

Table of contents

- [Choose a getting started guide](#)
- [License](#)

To use the Hasura GraphQL engine, you need to:

1. Run the Hasura GraphQL engine with access to a Postgres database
2. Use the Hasura console (an admin UI) that connects to the Hasura GraphQL engine to help you build your schema and run GraphQL queries

Choose a getting started guide

- [Using Heroku \(recommended\)](#): Get started in under 60 seconds with no setup required to host the Hasura GraphQL engine and Postgres on Heroku's free tier.
- [Using Docker](#): Run a **local development** setup that sets up both the Hasura GraphQL engine and Postgres using Docker.

Using an existing database

- [Using Heroku](#): Run on Heroku using an existing Heroku Postgres database.
- [Using Docker](#): Run as a docker container and connect to an existing Postgres database.
- [Using Kubernetes](#): Run on Kubernetes and connect to an existing Postgres database.
