

HOME > RECYCLING

Recycling

A Clear Vision for a Cleaner Planet.

Clean Earth's recycling capabilities allows our customers to collectively recycle millions of tons of material each year that would otherwise go into landfills. Through our network of full service facilities, Clean Earth has the technology and know-how to recycle contaminated soil, construction debris, aerosol cans, and various consumer commodities.

Contaminated Soil

Clean Earth operates eight full service soil recycling facilities along the east coast. Combining our various technologies and capabilities, with our strategic processing facility locations, Clean Earth is able to provide our customers with multiple recycling options for various types of contaminated soils.

Universal wastes:

- Batteries
- Pesticides
- Mercury-Containing Equipment
- Bulbs (Lamps)

Electronic wastes:

- Desktop Computers
- Laptop Computers
- Computer Monitors
- Computer Peripherals
- Televisions

Although not commonly recognized by the consumer, electronics may contain toxic metals such as lead, cadmium or mercury, along with other materials making the importance of proper disposal and recycling imperative to protect our environment.

In addition, proper disposal and recycling of universal waste provides the opportunity for qualified companies to reuse or refurbish an item, which ultimately preserves our natural resources as well.

HOME > ELECTRONIC WASTE

Electronic Waste

Sustainable solutions for some of the world's fastest growing waste streams.

Electronic waste, or E-waste, is a catch-all term to describe the waste created when electronic devices or components thereof are discarded. These often times contain dangerous chemicals such as heavy metals. These products are being produced at rates faster than ever before, creating more and more electronic waste each year.

Before they are thrown out, we rely on these products for our productivity, comfort, security, and convenience. When these products are no longer useful, it's imperative that they be handled in a responsible way that is legally compliant and reduces their potential environmental impact.

Clean Earth serves as a critical part in the lifecycle of these products. We are committed to

- Aerosols
- Data Destruction
- Coal Combustion Products
- Construction Debris
- Consumer Commodities
- Contaminated Soil
- Dredged Material

creating more and more electronic waste each year.

Before they are thrown out, we rely on these products for our productivity, comfort, security, and convenience. When these products are no longer useful, it's imperative that they be handled in a responsible way that is legally compliant and reduces their potential environmental impact.

Clean Earth serves as a critical part in the lifecycle of these products. We are committed to proper **end of life management of electronics containing sensitive data** and components hazardous to our environment. We offer an integrated strategy that allows our customers to reduce the amount of waste produced, implement best practices for handling waste on-site, and provide a full range of treatment options to meet specific needs. Each electronics processing facility has the distinct industry designation of being in our 2/ROS Certified Electronics Recycler™ facility and has been independently certified to achieve these industry designations.

We provide a unique risk management portfolio and managing used electronics. In addition to fully compliant recycling electronics, we are also well versed in the refurbishment and reuse of electronics, maximizing their useful life. As part of our program to mitigate environmental liability for our customers, we do not landfill or incinerate electronics nor do we export to developing countries.

We work hard to provide faster, smarter, greener solutions to our clients and communities, and collaborate on initiatives to help organizations and municipalities facilitate community hazardous waste drop-off events. Talk to a Clean Earth representative today to find out how we can help you limit the environmental impact of your business, organization, or municipality's

Clean Earth universal and electronic waste recycling facilities are nationally regulated and permitted. We are committed to a green world by helping clients in proper end-of-life management of assets containing sensitive data and components hazardous to our environment. We offer an integrated strategy that allows its clients to reduce the amount of waste produced, implements best practices for handling waste on-site, and provides a full range of treatment options to meet specific needs.

Each Clean Earth electronics processing facility has the distinct industry designation of being an R2/RIOS Certified Electronics Recycler™ facility and has been independently certified to achieve these industry designations.

Each Clean Earth universal and electronic waste facility is fully EPA permitted and complies with all state & federal EPA, OSHA, and DOT Regulations. Clean Earth recognizes that environmental management is one of our highest corporate priorities and conducts all aspects of its business accordingly as responsible stewards of the environment.

Zero-Waste-to-Landfill. 100% of electronics are recycled. Total data destruction for all information containing devices and components. Remanufacturing and resale of various electronics is performed in-house.

Easy truck access from Interstate 78.

Services

- Complete electronic recycling.
- Testing and refurbishment.
- State-of-the-art, Asset Management tracking capabilities using customized software which is web based for customer interaction and monitoring.
- On-site De-installation and Data Destruction services.
- Highest Security Data Destruction Services, including:
 - Compliance with all Federal Information Security Laws: HIPAA, Sarbanes-Oxley, FACTA, Graham Leach Bliley
