

PRODUCT

# A private securities crossing network providing market data, counter-party verification, and order execution to a membership of broker-dealers and institutionally-sized investors/shareholders.

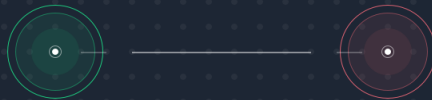

## 1° Deeper Liquidity

ZX compiles orders from a membership of broker-dealers, supporting deeper markets and higher cross rates.

## 2° Two Sided Market

Clients submit orders to buy and sell blocks of private securities, which are then vetted and crossed for execution.

## 3° Flexible Ticketing

ZX tickets support a range of order specifications, including being the first private trading platform to support "Firm Orders."

## 4° ZChat

Experienced, knowledgeable market operators give real-time feedback on price movements, security availability, and overall market trends.

## 5° Pricing and Volume Data

ZX seats afford members access to pricing and volume market data, as well as independent information from leading third-party data and information partners.
