## Teaching Resources for Health Psychology

Courses in health psychology are interdisciplinary in content and audience. Although the students in these courses are mainly psychology majors, substantial numbers of enrollees come from other disciplines, such as nursing, sociology, physical education, and allied health fields.

### COURSE DESCRIPTIONS

In general, health psychology courses examine how biological, psychological, and social factors interact with and affect:

1. The efforts people make in promoting good health and preventing illness;
2. The treatment people receive for medical problems;
3. How effectively people cope with and reduce stress and pain, and;
4. The recovery, rehabilitation, and psychosocial adjustment of patients with serious health problems.
