XPS

XPS is a superior provider of structural steel fabrication and Industrial Services . XPS offers an extensive line of services and products that are second to none. Our staff is dedicated and driven to produce the highest quality products possible with today's latest technology. Here at XPS no job is too big or too small for our 35,000 SQ ft facility. We build anything from large access platforms to a single pipe support. We value our customers and aim to please no matter the size of the project.

Quality Comes First

XPS strives to produce the best possible products that today's technology can provide. That being said there is no margin for error. That's why here at XPS we make it a point to put quality first. With our experience and knowledge in the industry we can Guarantee a quality product at a fair price on time.....everytime!

About Us

XPS is a company specializing in diverse products, services, and is willing to meet the custom needs of our clientele.

Our business model is based on the quality of our products as well as exceptional customer service. XPS takes pride in being able to meet our customers high expectations and growing demand for quality service. We still believe that quality products and good customer service is what matters most.

Our turn around times exceed other companies due to our efficient processes and our restraint to take on more work than we can handle. Therefore, ensuring a professional and dependable working relationship that's made to last.

If you value these qualities, you will not be disappointed doing business with us.

Thanks,
Chris Comalander

Services

Industrial Fabrication

At XPS we Fabricate a wide variety of structural steel as well as light gage sheet metal. We do everything from large platform to custom aluminum shrouds

Pipe Supports

Our pipe supports are like no other on the market. The XPS support can offer more room for adjustment than other companies supports without compromising structural integrity due to it's tubular frame.

Marine

We have designed and fabricated a couple of different work boats over the last couple of years. This one was designed for cleaning out vegetation and maintaing the banks of small lakes and ponds.

XPS-Split Casing Binders

We designed these binders to make the installation of split pipe casing safer for colonial pipe line. They are used by contractors such as EMS and Primoris Energy

XPS--Supports

The XPS support head design is also in a league of it's own. Unlike other adjustable supports our head bolts together rather than being welded. This allows the customer the option to change heads if need be.

Mini skids

They were designed for different loads.. this one pictured here was designed to hold 10,500 lbs and draft 8" of water..they could use it to transport small mini ex and skid steer

LOTO Storage boxes

This is an all aluminum construction tool box with an epoxy powder coat exterior with a bed liner coating material on the inside. The boxes are designed to hold LOTO boxes, locks, and all other necessary hardware

XPS-6

The XPS head is also more structurally sound because it is fabricated out of 6" channel rather than flat plate. Also the XPS comes equipped with an 1 1/2" to 2" stud depending on application. The stud is galvanized and put through a centerfuse rather than hot dipped...

XPS-I Supports

These supports are fabricated out of 6" X 4" X 1/4" I-Beam with a 3/8" top, 1/2" base plate and a 1/4" mid plate sleeved with 1 1/2" pipe to accommodate the 1 1/2" stud
