

DEFIBRILLATOR ANALYZERS

Defibrillator analyzers are used to test the performance and output of defibrillators.

We offer five different models with a variety of features including AED testing, ECG/Arrhythmia simulation, and pacemaker testing. Scroll down for a summary of each of our defibrillator analyzer models.

Netech Defibrillator Analyzers are -

- Compact
- Easy to Use
- FDA Approved
- Made in the USA

NEW PRODUCT

Delta 3300 Defibrillator tester, External pacemaker analyzers >>>

Delta 3300 Defibrillator / Transcutaneous Pacemaker Analyzer is a precision instrument for testing and evaluating the performance of defibrillators and external Transcutaneous Pacemakers.

Delta 3300

Description: Defibrillator / Pacemaker Analyzer

Highlights

- Energy and cardioversion measurement
- Peak voltage and current reading
- Waveform Storage and Playback.
- Tests all Automated defibrillators
- Pacemaker loads from 50 to 1100 Ohm
- Pacer Amplitude, Rate, Pulse width
- Demand Sensitivity, Refractory period, immunity and pulse Energy
- 12 Lead ECG, Arrhythmia, Performance
- Li-Ion Rechargeable Battery

NEW PRODUCT

Delta 1600 Automated External Defibrillator (AED) Analyzer >>>

The Delta 1600 is a precision, compact, and battery operated instrument for testing automated external defibrillators (AEDs). The Delta 1600 simulates various cardiac waveforms to ensure that the AED can detect, analyze and audibly advise shock. In addition to the shock advisory test, Delta 1600 measures discharged energy of the AED, thereby ensuring that the AED complies with specified requirements.

Delta 1600

Description: AED Tester

Highlights

- Unique, one-of-a-kind instrument for testing all AEDs including Pulsed (Schiller AEDs)
- Compact, lightweight and easy-to-use
- Auto Function – Eliminates multiple discharges
- Large backlit Graphics Display
- Multiple Arrhythmia simulations
- 7.4 Volt Li-Ion Rechargeable battery
- Five-Year Warranty
