Why CSM?

CBI's CSM offering is designed to enhance and support your existing IT security posture. The services are customizable to help meet the exact needs of your team. If you're building a new IT security practice CBI Advisory Manager includes strategic leadership giving you access to our Virtual CISO team. During an incident, CSM provides you with an established practice. Threat, Compliance, or Advisory Manager all provide deep reporting for your organization to help decide what steps are next.

How CSM Works

CBI CSM is a service, not an off-the-shelf product, CSM is built around people, our team and yours. It integrates proven security tools, CBI's Security Operation Center (SOC), and custom security reporting built by our SOC analysts using practices like Open Source Intelligence (OSINT) to help you identify your vulnerabilities.

Additional Managed Services For CSM

CBI CSM has the flexibility to incorporate additional services such as Security Information Event Management (SIEM), Data Loss Prevention (DLP), Managed Vulnerability and Patch (MVP), and managed firewall. By adding some

What Is A CISO?

The Chief Information Security Officer [CISO] function is a requirement for every business organization, shouldering responsibility for the protection of information assets, technologies, and creating the strategy and vision to continued protection of a
