Wireless Outdoor Lighting Control Solution

Exterior lighting, especially in parking lots and garages, represents a significant aspect of facility operations and maintenance, and it is often controlled independent of other building systems. Limelight by Lutron streamlines specification and design, makes your exterior lighting smarter, and can connect to Lutron Enterprise Vue software to control all building lighting from a single sign-on.

Limelight by Lutron

Overview | Features | Resources

Features

- **System design** – Just count the number of outdoor fixtures.
- **Single gateway control** – Control up to 800 luminaires with no repeaters necessary. A cellular gateway option requires no connection to the building network and eliminates the need for Ethernet drops.
- **Scheduling** – Adjust light levels for predictable events. Use time-of-day, occupancy, and/or daylighting functionality; e.g., disable occupancy sensors during work hours, enable for after-hours.
- **Intelligent fixture groupings** – Program entire floor or area to turn on when an occupant enters from a stairwell or elevator; have all lighting in the lot turn on in response to an entering vehicle.
- **Reactive events** – Adjust light levels based on daylight and/or occupancy sensor data, and save energy while ensuring adequate illumination.
- **Enhance security** – Settings can be enabled to include grouped occupancy, custom unoccupied lighting levels to accommodate security cameras, and email alerts in response to fixture issues.

Enterprise Vue

Combines data from multiple Lutron systems, giving you a comprehensive picture of your campus – so you can make informed, actionable decisions.
