MANAGE

Administer the membership and loan process simply and easily

The Origins system is cloud-based, extremely secure and reliable, and designed to integrate smoothly with your existing platforms and processes. We seamlessly supplement the platforms you have in place.

KEY BENEFITS

– Data is always safe, secure, accurate, and backed up

– Highly reliable system is always available

– Easily track staff data on applications for rewards and incentives

About Us

The Origins system was developed by eCU Technology, a Credit Union Service Organization (CUSO) owned by First Service Credit Union of Houston. After proving itself by streamlining and expediting the First Service membership and loan signup processes, eCU Technology will begin offering Origins in 2016 to credit unions across Texas and the entire country. This is a new concept that focuses on a clear credit union need that no other CUSO is addressing.

The Origins service platform is cloud-based, fault-tolerant, and assures the accuracy of all applicant data. Designed to supplement a credit union's existing Symitar core system, it integrates seamlessly. Its simple and elegant design speeds the signup process for members and loan applicants, cutting the application time by more than half.

eCU Technology is committed to constant improvement and development of the foundational software based on the experience and feedback of all the key stakeholders – credit unions, staff, and members and loan applicants. The agile development process used by eCU Technology means the system is always improving, but because it is cloud-based, there is never a need for a credit union to worry about implementing software upgrades or other system updates. They will always be working with the latest and best version of the system.
