PASSHUB FOR BUSINESS

Making convenient collaboration secure

In today's world domineered by usernames and passwords, businesses need to share credentials and files with internal employees and external customers quickly and easily. But sharing can't come at the expense of security.

That's why we created PassHub for Business.

Combining client-side encryption with intuitive data sharing, PassHub for Business is a dedicated platform for secure collaboration.

Contact Us

PASSHUB ENABLES YOUR BUSINESS TO
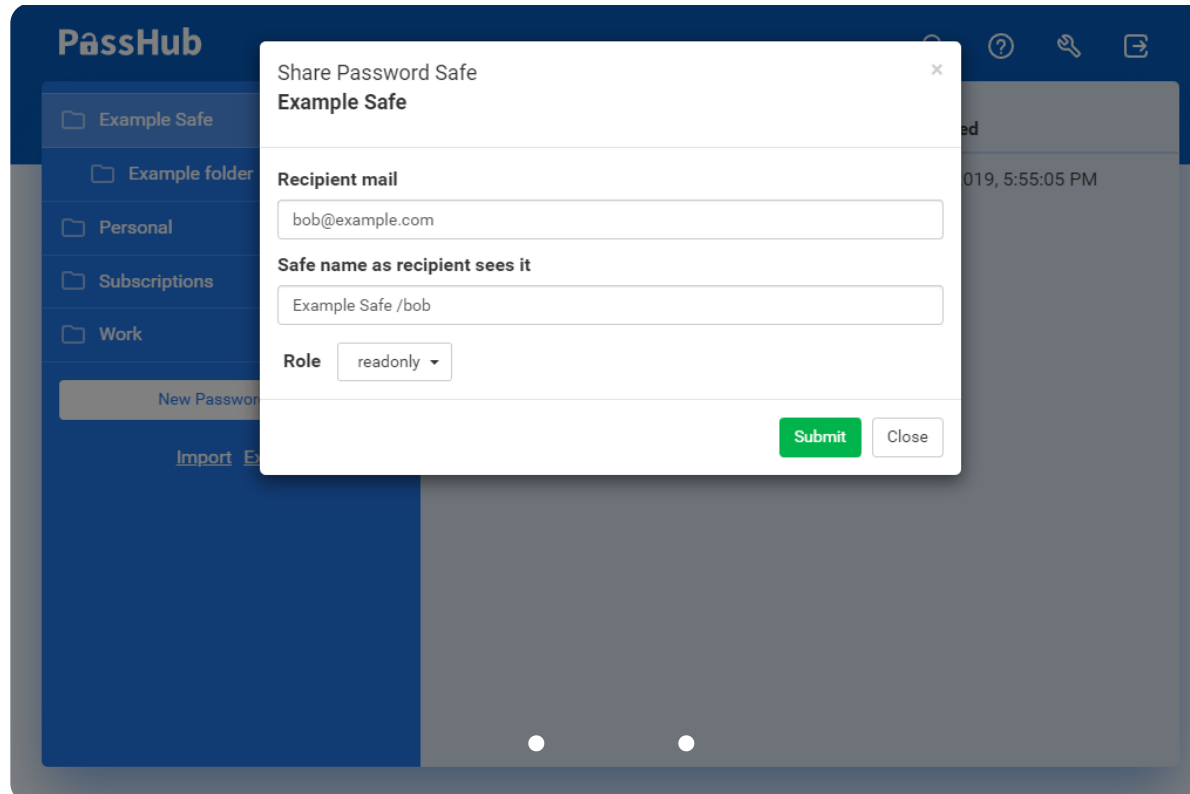

Securely store business credentials, notes and files

1. Organize your data with PassHub Safes--top-level folders and subfolders

2. Search and find records with our robust search tool

3. Generate strong passwords according to your business requirements

4. Backup/restore your data

Collaborate with team and clients

① Share individual safes with team members, partners, and clients

② Use granular access to keep all information on a need-to-know basis

③ Leverage end-to-end encryption so administrators cannot access user data, eliminating potential for insider threats

Manage user access

① Across the entire PassHub service:

Invite users to PassHub

Track user activities

Delete user accounts

(2)   Within each PassHub safe:

Assign roles to safe users (read only, editor, admin)

Revoke user access to the safe, while maintaining access for
your organization

Migrate from KeePass

Import your KeePass data to finally start sharing business

credentials and files (e.g. SSL certificates) with your team

2   Export your PassHub data for backup in your cloud

FLEXIBLE DEPLOYMENT OPTIONS TO FIT ANY ENVIRONMENT

PassHub for Business is available as a self-hosted or SaaS PassHub

SELF-HOSTED PASSHUB

Deployed on your company's servers, this option gives you full control over PassHub source code and sensitive user data.

Full-featured server installation including SMTP server, SSL certificates, distributed MongoDB database, general security protection, updates and support.

PassHub for Business is an open source project which itself is free for you to use within your organization's own infrastructure. However, to make PassHub work, you will need a subscription to the WWPass Authentication Service.

Get the source code from GitHub

SAAS PASSHUB

Passhub for Business may also be deployed as a SaaS version, hosted by Passhub.net. This approach eliminates the burden of server configuration and support, while still letting you control user accounts on the company's PassHub account.

To get a dedicated SaaS PassHub for your business at a domain of your choice, but have us host it, is $100/month for unlimited users plus 500GB of storage.
